=Syn. *Banish*, *Exile*, *Expel*, expatriate, put away, are all used of removal by physical or moral compulsion; they all have a figurative as well as a literal use. To *banish* is, literally, to put out of a community or country by ban or civil interdiction, and indicates a complete removal out of sight, perhaps to a distance. To *exile* is simply to cause to leave one's place or country, and is often used reflexively; it emphasizes the idea of leaving home, while *banish* emphasizes rather that of being forced by some authority to leave it: as the bitterness of *exile*; *banished* to Siberia. *Expel*, literally, to drive out, means primarily to cast out forcibly and violently, and secondarily with disgrace: as, to *expel* from the chamber, or from college; he was *expelled* the country.

An institution for receiving and lending money. The banking institutions of the United States may be classed as *national* and *State banks*, *savings-banks*, *private banks* or *bankers*, and *loan and trust companies*. National banks were first authorized by a law of the United States enacted in 1863, for a term of twenty years. In 1864 another act was adopted (allowing the like term of twenty years), which was thereafter known as the *National Bank Act*. In 1883 they were authorized to continue twenty years longer. They receive, lend, and transmit money, and issue notes which are used as money, and buy, sell, and collect bills of exchange. Their circulating notes are secured by United States bonds deposited with the government, and their operations are subject to the inspection and supervision of the Comptroller of the Currency. State banks perform the same functions except that of issuing notes. The notes of the State banks were taxed 10 per cent. by Congress in 1865, in order to cause their retirement, which was speedily accomplished. Private banks and bankers carry on the same business as the State banks. Sometimes one person constitutes a private bank, but generally several persons associate together and form a partnership. Loan and trust companies are incorporated institutions, and receive deposits, usually for a fixed period, and loan them on the pledge of stocks, bonds, and other securities, while national and State banks lend largely on the promises of the borrowers; they have also a capital which is subscribed and paid by the stockholders. Savings-banks receive money and lend it chiefly on the security of real estate. See *savings-bank*. In Europe several great national banks are intimately associated with the fiscal departments of the governments of their respective countries, as the Bank of England and the Bank of France. Banks of issue are such as issue notes that circulate as currency. In London and for sixty-five miles around no bank having more than ten partners, save the Bank of England, is allowed to issue its own notes.

5. The office in which the transactions of a banking company are conducted.—*Bank-charter Act*, an English statute of 1844 (7 & 8 Vict., c. 32) defining the powers of the Bank of England in respect to the issue of notes and the amount of bullion reserve. Its object was to avoid the danger of the over-issue of circulating notes, which it accomplished by fixing a limit to the amount of bullion held by the bank. It also regulated the issue of notes by other banks. Also known as the *Peel Act*, and *Sir Robert Peel's Act*.—*Bank discount*. See *discount*.—*Bank men*, in *U. S. hist.*, supporters of the second United States Bank in its contest with President Jackson. Two institutions have been chartered by Congress under the title Bank of the United States, having their seat in Philadelphia, and intimately connected with the national finances. The charter of the first, granted in 1791, expired in 1811, its renewal having been refused. The second lasted from 1816 to 1836 under the national charter, and was continued for a time as a State bank. The opposition of President Jackson to the renewal of its charter, and his removal of the government deposits from it in 1833, led to a violent political contest, in which his course was ultimately sustained.—*Bank of issue*, a bank or banking company duly authorized by law to issue bank-notes of its own.—*Bank post-bill*. See *bill*².—*Days in bank*. See *day*¹.—*National Bank Act*, an act of Congress of 1864, providing for the organization throughout the

United States of banks whose circulating notes were required to be secured by a deposit of United States bonds, which resulted, as was intended, in providing a market for a very large government loan, and at the same time a secure currency equally acceptable in all parts of the country.—**Penny-banks Act**, an English statute of 1859 (22 and 23 Vict., c. 63) authorizing the investing of the funds of penny savings-banks, charitable societies, etc., in the money of established savings-banks.—**To break the bank**, to win, as in faro, from the management a certain sum which has been fixed upon as the limit which the bank is willing to lose in a single day.—**To play against the bank**, to take the risks of a game, as rouge-et-noir or faro, in opposition to its manager.

2. Figuratively, utter wreck; ruin.—**Act of bankruptcy**, in *law*, an act the commission of which by a debtor renders him liable to be adjudged a bankrupt. Among acts of bankruptcy are the assignment of his property by a debtor to a trustee for the benefit of his creditors; the making of a transfer of any of his property in fraud of his creditors, or the concealment or removal of it to evade legal process; departing from the country, or remaining out of it, in order to defeat or delay creditors; the filing in court of a declaration of inability to pay debts; non-payment of debts under certain other circumstances defined by the law as indicating insolvency.—**Assignee in bankruptcy.** See *assignee*.—**Bankruptcy commissioner, or register in bankruptcy**, a judicial officer empowered, subject to the supervision of the court, to investigate and adjudicate upon the affairs of bankrupts.—**Bankruptcy laws**, the statutory regulations under which the property of an insolvent may be distributed among his creditors, with the double object of enforcing a complete discovery and an equitable distribution of the property, and of discharging the debtor from his obligations and from future molestation by his creditors. Formerly, only a trader could be made a bankrupt under the bankruptcy laws, other persons who were unable to meet their obligations being *insolvents*. The distinction was abolished in the United States in 1841 and in Great Britain in 1869. In the United States, Congress has the power of enacting bankruptcy laws which shall be uniform throughout the country. These laws are administered by the federal

courts. Laws having similar objects, but less efficacious in respect of discharging the debtor, are maintained by many of the States, but can operate to give a discharge irrespective of creditors' assent only when there is no federal bankruptcy law. These are termed *insolvent laws*. In England bankruptcy laws have existed from the time of Henry VIII. The principal acts are: 34 and 35 Hen. VIII., c. 4, directed against fraudulent debtors, and empowering the lord chancellor and other high officers to seize their estates and divide them among the creditors; 13 Eliz., c. 7, restricting bankruptcy to traders, and prescribing certain acts by committing which a trader became a bankrupt; 4 Anne, c. 17, and 10 Anne, c. 15, removing the criminal character borne by bankruptcy proceedings up to that time, and permitting a debtor to obtain a certificate of having conformed to the requirements of the bankrupt law; 6 Geo. IV., c. 10, allowing a debtor to procure his own bankruptcy, and introducing the principle of private settlements between debtors and creditors; 1 and 2 Wm. IV., c. 56, establishing a court of bankruptcy, consisting of six commissioners along with four judges, as a court of review, and making provision for official assignees. By the Bankrupt Consolidation Act of 1849, proceedings might be begun by petition to the Court of Bankruptcy, and the commissioners were authorized to award certificates according to the merit of the bankruptcy. The bankruptcy act of 1861 (24 and 25 Vict., c. 134) abolished special legislation relating to insolvent debtors, and permitted persons other than traders to avail themselves of the relief afforded by the bankruptcy court. In 1869 (32 and 33 Vict., c. 71) the commissioners and official assignees were abolished, a new Court of Bankruptcy was established, and provision was made for the appointment of trustees who should be creditors. The Court of Bankruptcy was also stripped of its criminal jurisdiction, the criminal clauses being placed in another statute, the Debtors' Act, which abolished imprisonment for debt except in certain cases. In 1883 (46 and 47 Vict., c. 52, taking effect Jan. 1, 1884) the English bankruptcy acts were amended and consolidated. In the United States the subject has been, except during the periods of the operation of the United States bankruptcy acts, left to the imperfect regulation of diverse State laws. Such a law in any particular State may, when there is no United States act conflicting, provide for the distribution of an insolvent's property, may discharge him from imprisonment for debt, and may discharge him, if a citizen of such State, from indebtedness to another citizen thereof contracted while such State law was in force, so far as to make the discharge a protection in the courts of the same State. The first United States bankrupt law, known as the act of 1800 (2 Stat. at L., p. 19), was based on a consolidation of then existing English statutes, and was in force from June 2, 1800, till Dec. 19, 1803. The second, the act of 1841 (5 Stat. at L., p. 440), was in force from Feb. 1, 1842, till March 3, 1843. The third, the act of 1867 (14 Stat. at L., p. 517), repeatedly amended, and finally revised in the United States Revised Statutes, tit. LXI., and reenacted with modifications in 1874 (18 Stat. at L., p. 178), was in force from June 1, 1867, till Sept. 1, 1878. In general, debts contracted by fraud, or in a fiduciary capacity, are not discharged by the bankruptcy laws.—**Commission of bankruptcy**, a commission formerly issued by the English lord chancellor, appointing and empowering certain persons to examine into the facts relative to an alleged bankruptcy, and to secure the bankrupt's property for the creditors.—**Discharge in bankruptcy**. See *discharge*.—**Fiat in bankruptcy**. See *fiat*.—**Fraudulent bankruptcy**. See *fraudulent*.—**Involuntary bankruptcy**, bankruptcy adjudged on the petition of creditors, showing cause why the bankrupt should not be allowed to continue in possession of his assets.—**Voluntary bankruptcy**, bankruptcy adjudged on the petition of the debtor, indicating his desire to surrender his assets and be discharged.—**Syn.** *Insolvency*, etc. See *failure*.

One who is bannered or entitled to a banner; specifically, a knight of a certain grade in the military hierarchy of the middle ages. Originally the right to display a banner (as distinguished from a pennon) was limited to those who could bring a certain array of followers into the field, and who had also been dubbed or accoutred knight. As the military distinctions of earlier feudalism became confused by the employment of paid soldiers, the right of displaying a banner became more and more a reward for distinguished prowess in battle. After a victory or a notable achievement a banneret elect, carrying his pennon in his hand, was, it is said, conducted between two knights of note, and presented to the king or general, who cut off the point or ends of his pennon, making it square. He was then called a *knight of the square flag*. Also called *knight banneret*. Sir Richard Croftes, who was made banneret at . . . Stoke, was a wise man. Camden, Remains (ed. 1637), p. 271.

That'll die of old age when it's seven years old.

James Smith, *Rejected Addresses*.

Bantu (ban'tö), *n.* [A native name, lit. 'people.'] A name sometimes applied to the South

African family of tongues. The most marked peculiarity of these languages is their prevailing use of prefixes instead of suffixes in derivation and inflection. Those of them that border on the Hottentot employ clicks or clucks as alphabetic elements. Also called *Chiana* and *Zingian*.

baobab (bā'ō-bab), *n.* [Formerly also *bahobab*; a native African name.] An African tree, the *Adansonia digitata*, belonging to the tribe *Bombaceae*, natural order *Malvaceae*, also called the Ethiopian sour-gourd, and in South Africa the cream-of-tartar tree. It is a native of tropical Africa, and has been introduced and naturalized in various parts of the East and West Indies. It is one of the largest trees in the world, being often found 30 feet in diameter, though it grows to a height of only from 40 to 70 feet. The branches shoot out from 60 to 70 feet, bearing a dense

mass of deciduous leaves, somewhat similar to those of the horse-chestnut. The white flowers are from 4 to 6 inches broad, and the oblong gourd-like fruit, about a foot in length, is eaten by monkeys, and hence is called *monkey-bread* (which see). The juice of the fruit mixed with sugar is much esteemed as a beverage; and the pulp, which is pleasantly acid, is eaten, and is employed as a remedy in Egyptian dysentery. The dried and powdered meiliginous bark and leaves are used by the negroes, under the name of *lato*, on their food, like pepper, to diminish perspiration; and the strong fiber of the bark is made into ropes and cloth. The only other known species of this genus are the Australian sour-gourd or cream-of-tartar tree, *Adansonia Gregorii*, which differs chiefly in its smaller fruit, and the Madagascar baobab, *A. Madagascariensis*, which has red flowers.

Baphomet (baf'ō-met), *n.* [P. *Baphomet*; Pr. *Bafomet*, OSp. *Mafomat*, regarded as a corruption of *Mahomet*. Cf. *Mahound* and *Mammel*.] The imaginary idol or symbol which the Templars were accused of worshipping. By some modern writers the Templars are charged with a depraved Gnosticism, and the word Baphomet has had given to it the signification of baptism of wisdom (as if Gr. βαφή, baptism, + μέτρος, wisdom), baptism of fire; in other words, the Gnostic baptism, a species of spiritual illumination. But this and the other guesses are of no value. The word may be a manipulated form of *Mahomet*, a name which took strange shapes in the middle ages.

Baphometric (baf'ō-met'ik), *a.* [P. *Baphomet*.] Of or pertaining to Baphomet, or to the rites in which it was supposed to be employed.

It is from this hour that I incline to date my spiritual new-birth or Baphometric Fire-baptism; perhaps I directly thereupon began to be a man. *Carlyle*, Sartor Resartus, p. 117.

The wild indigo, *B. tinctoria*, has been used for dyeing, and its root in medicine as a laxative, and in larger doses as a cathartic and emetic. Some species, especially the blue-flowered *B. australis*, are occasionally cultivated in gardens.

baptism (bap'tizm), *n.* [ME. *baptisme* (usually and earlier *baptim*, *baptym*, *baptem*), < OF. *baptesme*, *bapteme*, *batesme*, *bateme* (mod. F. *baptême*), < LL. *baptisma*, < Gr. βάπτισμα, also βαπτισμός, < βαπτίζω, dip or plunge in or under water, sink (a ship), drench, soak, draw (wine) by dipping with a eup; in N. T. and eccl., baptize.] 1. A sacrament or ordinance of the Christian church, instituted by Christ as an initiatory rite, consisting in the immersion of the person in water, or in the application of water to the person by affusion or by sprinkling, by an authorized administrator, "in the name of the Father, and of the Son, and of the Holy Ghost." The proper signification of the rite, the proper subjects of it, and the proper methods of administering it, are matters of dispute in the Christian church. In Protestant churches it is generally regarded as a symbol of purification, a rite of initiation into the visible church of Christ, and a sign ratifying God's covenant with his people. In the Roman Catholic Church baptism is the sacrament of initiation into the church of Christ, consisting essentially in the application of water to the person baptized by one having the intention of conferring the sacrament, and who pronounces at the same time the words, "I baptize thee in the name of the Father, and of the Son, and of the Holy Ghost." The Greek formula, "The servant of God is baptized in the name," etc., is also recognized as valid. In all branches of the church a layman may, in case of necessity, administer baptism. In the Roman Catholic, Greek, and most Protestant churches, infant children are admitted to baptism; but among the various Baptist denominations only those are admitted who give credible evidence of possessing a Christian experience. Among them, also, it is generally performed by immersion, which they regard as the Scriptural mode. This is also the common mode in the Eastern churches; in the Western churches sprinkling or pouring is commonly substituted. The Friends reject all baptism with water, regarding Christian baptism as spiritual only.

Baptism is not only a sign of profession, and mark of difference, whereby Christian men are discerned from others that be not christened, but it is also a sign of Regeneration or New-Birth, whereby, as by an instrument, they that receive *Baptism* rightly are grafted into the Church; the promises of the forgiveness of sin, and of our adoption to be the sons of God by the Holy Ghost, are visibly signed and sealed; Faith is confirmed, and Grace increased by virtue of prayer unto God.

Articles of Religion of Ch. of Eng. and Prot. Epis. Ch.

We believe in . . . baptism to be administered to believers and their children, as the sign of cleansing from sin, of union to Christ, and of the impartation of the Holy Spirit. *Congregational Creed*, 1833.

2. Any ceremonial ablution intended as a sign of purification, dedication, etc.: as, the baptism administered by John the Baptist, or that administered to proselytes by the ancient Jews; the baptism or christening of bells, ships, and other objects in the Roman Catholic Church, etc.

The publicans justified God, being baptized with the baptism of John. *Luke* vii. 29.

Baptism for the dead, the baptism of a living person instead of and for the sake of one who has died unbaptized. The performance of such a ceremony, although disapproved by the church, is on record in a number of individual cases among the early Christians, and is also said to have been a custom of several ancient sects, the Ebionites, Marcionites, and others. In modern times it has been revived by the Mormons. This practice has been supposed by many to be alluded to in 1 Cor. xv. 29, but other explanations of the passage have been given.—**Baptism of blood**, martyrdom for the sake of Christ, regarded as supplying the absence of the sacrament of baptism.—**Baptism of desire**, the virtue or grace of baptism received by a person who dies earnestly desiring that sacrament, but unable to obtain it.—**Baptism of fire**. (a) The gift or gifts of the Holy Spirit; the grace of baptism considered separately from the outer form. (b) Martyrdom.—**Clinic or clinical baptism**, baptism on a sick-bed. In the early church this was allowed only in case of impending death, and was sometimes refused even then, except to persons already candidates. Such baptism was recognized as valid; but a person so baptized was not ordinarily eligible to orders, perhaps because it was judged that fear had induced the reception of the sacrament. **Conditional baptism** (also called *hypothetical baptism*), in the Roman Catholic and Anglican churches, baptism administered to persons in respect to whom it is doubtful whether they have been baptized or not, or whose known baptism is of doubtful validity. The condition is then regularly inserted in the formula: "If thou art not baptized," etc.—**Private baptism**, baptism conferred in the home or elsewhere, without the ceremonies prescribed for the rite of solemn baptism in the church.—**Seal of baptism**. (a) The rite of union in baptism. (b) Same as *baptismal character* (which see, under *baptismal*).

baptismal (bap-tiz'mal), *a.* [P. *baptism* + -al; = L. *baptismal*.] Pertaining to baptism: as, "the baptismal vow." *Hammond*. **Baptismal character**, a spiritual and indelible mark attaching to the souls of baptized Christians from their reception of the sacrament. This term is used officially by the Roman Catholic Church, and also by theologians of the Greek, Oriental, and Anglican churches, to express the doctrine of those churches that a baptized person can for good or for evil never be as one unbaptized, and that the sacrament cannot be repeated without sacrilege. Also called the

seal, or the *seal of baptism*. See *baptism*.—**Baptismal name**, the personal or Christian name given at baptism.—**Baptismal regeneration**, the doctrine of the remission of original and actual sin, and the new birth into the life of sanctifying grace, in and through the sacrament of baptism.—**Baptismal shell**, a real shell polished, or a small metal vessel in the shape of a scallop-shell, used to take water from the font and pour it upon the head of the candidate in baptism.—**Baptismal vows**, the promises made at baptism by the person baptized, or by the sponsors in his name.

baptismally (bap-tiz'mal-i), *adv.* In or through baptism; by means of baptism.

baptist (bap'tist), *n.* [ME. *baptist* (only in reference to John the Baptist), < LL. *baptista*, < Gr. βαπτιστής, one who baptizes, < βαπτίζω, baptize; see baptize.] 1. One who administers baptism: the title (with a capital letter) of John, the forerunner of Christ.

Him the Baptist soon described. *Milton*, P. R., i. 25.

2. [*cap.*] A member or an adherent of one of those Christian denominations which maintain that baptism can be administered only upon a personal profession of Christian faith. Generally, though not always, Baptists are immersionists. This doctrine has been held from a very early age of the Christian church; but the Baptists as a distinct denomination date from the epoch of the Reformation, and were originally called *Anabaptists* by their opponents. In the United States the Baptists owe their origin to Roger Williams, who was originally a minister of the Church of England. The principal Baptist denominations are the *Baptists*, sometimes called *Calvinist Baptists*, from their Calvinistic theology; *Freewill Baptists*, who are Arminian in theology and open communionists in practice; *German Baptists*, popularly called *Dunkers*; *General Baptists*, a party of English Baptists who are Arminian in theology and hold to a general atonement (opposed to *Particular Baptists*, who are Calvinistic); *Old-School Baptists*, sometimes called *Anti-Mission* or *Hard-Shell Baptists*, from their extreme Calvinism, which leads them to oppose all active measures for the conversion of the world (a sect numbering 40,000); *Seventh-Day Baptists*, who keep the seventh day, instead of the first, as the sabbath; *Six-Principle Baptists*, so called from the six principles which constitute their creed (they practise "laying on of hands," and refuse communion to all who do not); *Disciples of Christ*, also called *Christians* or *Campbellites*, an American denomination growing out of the labors of Alexander Campbell, and separately organized in 1827; *Winebrenerians*, or *Church of God* (organized in 1830 by John Winebrener), who maintain the washing of feet as an ordinance of perpetual obligation; and *Christians*, or the *Christian Connection*, an American sect of Unitarian Baptists founded about 1800. The Baptists are congregational in polity, and generally Calvinistic or semi-Calvinistic in theology. Those of Great Britain do not generally regard baptism by immersion as a prerequisite to communion, and therefore commune with other churches; but the opposite position is, with few exceptions, adopted by the Baptists of the United States. The former are popularly called *open-communicationists*, the latter *close-communicationists*.

baptistry, baptistery (bap'tis-tēr-i-ri), *n.*; pl. *baptisteries, baptistries* (-iz, -triz). [L. *baptisterium*, a place for bathing (LL. in eccl. sense), < Gr. βαπτιστήριον, < βαπτίζω, baptize; see bap-

tize.] A building or a portion of a building in which is administered the rite of baptism. In the early Christian church the baptistry was distinct from the church-building, and was situated near its west end; it was generally circular or octagonal in form, and domed. About the end of the sixth century the baptistry began to be absorbed in the church, within which the font was placed, not far from the western door. The detached baptistry was, however, often preserved, especially in Italy; and many such baptisteries still remain in use, as that of St. John Lateran in Rome, and those of the cathedrals of Pisa, Florence, etc. As a separate building the baptistry was often of considerable size and great architectural beauty; that of Florence is 118 feet in external diameter. In the West, baptisteries were in early times commonly dedicated to St. John the Baptist. See *font* and *baptismal*.

baptistic, baptistical (bap-tis'tik, -ti-ka), *a.* [P. *baptism*.] Pertaining to baptism: as, "the baptistical vow." *Hammond*. **Baptistical character**, a spiritual and indelible mark attaching to the souls of baptized Christians from their reception of the sacrament. This term is used officially by the Roman Catholic Church, and also by theologians of the Greek, Oriental, and Anglican churches, to express the doctrine of those churches that a baptized person can for good or for evil never be as one unbaptized, and that the sacrament cannot be repeated without sacrilege. Also called the

Any one of the pieces of defensive armor used in mediæval Europe to protect the horse. There is no record of any general use of such armor in antiquity or among Oriental peoples, or in the European middle ages before the fifteenth century. Housings of different kinds of stuff, sometimes quilted and wadded in exposed parts, the saddle with its appurtenances, and occasionally a chanfron, were all the defense provided for horses until that time. The piece of armor most commonly used after the chanfron (which see) was the bard of the breast. See *poitril*. The *croupière*, or part covering the hanches, was added at the close of the fifteenth century; but after the wars of the Roses the bards reached their fullest development, and the upper part of the body of the horse was covered as completely with steel as the body of his rider. It is largely employed for feeding animals, but its chief use is in the manufacture of fermented liquors, as beer, ale, and porter, and of whisky. No other grain can be cultivated through so great a range of climate, for it matures in Lapland, Norway, and Iceland, in 65° and 70° north latitude, and at an altitude of 11,000 feet in the Andes and Himalaya. The only cultivated species that has been found wild is the two-rowed or long-eared barley, *H. distichon*, a native of western Asia, but in cultivation in prehistoric times, as was also the six-rowed species, or winter barley, *H. hexastichon*. OF. *bernique* (ML. *bernaca*, *berneca*), later F. *bernacue*, mod. *barnache*, *barnacle* = Sp. *bernache* = Pg. *bernaca*, *ber-nacha*, *berniecha* = It. *bernacla*, later ML. or NL. *berniela*, *bernecla*, *berniacula*; G. *berniel-gans*, Dan. *berniel-gaas*. Ultimate origin unknown. The word seems to have arisen in England. The oldest ME. form, *bernecke*, could be simply 'bare-neck,' with a possible allusion to the large white patches on the bird's neck and head. If this were a popular designation, it could easily, when taken into book-language and Latinized, assume the above and the other numerous corrupt forms (ML. *berniecha*, *bernecha*, *bernescha*, *bernesta*, etc.) in which it appears. The loss of a knowledge of its meaning would assist the growth of the fables connected with the word.] 1. A species of wild goose, *Anser ber-*

Barnacle-goose (*Bernicla leucopsis*).

niela or *Bernicla leucopsis*, also called *barnacle-goose* or *bernecke-goose*. It is one of several species of the genus *Bernicla*, inhabiting the northern parts of Europe, and occasionally appearing as a straggler in North America. It is smaller than the various wild geese of the genus *Anser* proper, has dark-brown or blackish upper parts, and a black neck and head, with large white patches. It is related to the common wild goose of North America, *B. canadensis*, and still more closely to the Brent- or brant-goose, *Bernicla brenta*. This bird, which was known in the British islands only as a visitor, became the subject of a curious popular fable, not yet extinct, being believed to be bred from a tree growing on the sea-shore, either from the fruit of the tree or as itself the fruit (hence called *tree-goose*), or from a shell-fish which grew on this tree (see def. 2), or from rotting wood in the water.

So rotten planks of broken ships do change
To *Barnacles*. . . .

'Twas first a green tree, then a broken hull,
Lately a Mushroom, now a flying Gull.

Sylvester, tr. of Du Bartas, i. G.

2. A species of stalked cirriped, *Lepas anatifera*, of the family *Lepadida*, found hanging in clusters by the long peduncle to the bottoms of ships, to floating timber, or to submerged wood of any kind; the goose-mussel, fabled to fall from its support and turn into a goose (see def. 1). The name is sometimes extended or transferred to various other cirripeds, as the sessile corn-shells or scaevens of the family *Balanidae*, such as *Balanus tintinnabulum*. See *Balanus*. This is the usual sense of the word, except in Great Britain.

A *barnacle* may be said to be a crustacean fixed by its head, and kicking the food into its mouth with its legs.
Huxley, Anat. Invert., p. 256.

3. Anything resembling a barnacle (in sense 2). (a) Any anomalous growth or extraneous adhering matter or arrangement tending to impede progress.

Mrs. Whitney, Gayworthys, xxiv.

barnacle² (bär'nā-kl), *n.* [Also *barnicle*, *ber-nicle*; < ME. *barnakylle*, *byrnacle*, *bernecke* (< OF. *berniele*, an instrument of torture), appar. a dim. of the earlier *bername*, *bernak*, *bernac*, < OF. *ber-nac*, a barnacle (def. 1); origin unknown. The word *branks*, *q. v.*, has a similar meaning, but no connection can be made out. The sense of 'spectacles' easily arises from the original sense; but some connect *barnacles* in this sense with OF. *beriecle*, mod. F. *besicle*, eye-glass (< ML. **bericulus*, dim. of *berillus*, *beryllus*, *beryl*: see *beryl* and *brills*), or with mod. F. dial. *ber-niques*, spectacles.] 1. A kind of bit or muzzle used to restrain an unruly horse or ass; now (usually in the plural), an instrument consisting of two branches joined at one end with a hinge, placed on a horse's nose to restrain him while being shod, bled, or dressed.

The *Barnburners* opposed the extension of the canal system, and after 1846 they opposed the extension of slavery in the Territories. In a few years most of them joined the new Free-soil party.

The internal reform of a party cannot be carried out by corrupt leaders. One of the main objects of the reformers was to break the influence of the latter, and to this they owed their appellation of *barnburners*, their enemies charging them with a readiness to burn the building with the vermin, in default of a less radical means of purification.
H. von Holst, Const. Hist. (trans.), III. 359.

barograph (bar'ō-gráf), *n.* [Gr. *βάρος*, weight, + *γραφειν*, write.] A self-registering instrument for recording variations in the pressure of the atmosphere. It is made by attaching to the lever of a counterpoised barometer an arm with a pencil in contact with a sheet of paper, and moved uniformly by clockwork. The result is a continuous trace, whose changes of form correspond to the variations of pressure. In another form a ray of light is made to traverse the upper part of the barometer-tube and fall on a moving ribbon of sensitized paper, the rising and falling of the mercury in the barometer causing the beam of light to be increased or diminished in width, thus showing the changes in the barometer by the continuous photographic record of the paper. In still another form the movement of the mercury-column is used to close an electric circuit and thus report its movements. Also called *barometrograph*.

barographic (bar'ō-gráf'ik), *a.* [Gr. *barograph* + *-ic*.] Of or pertaining to a barograph; furnished by the barograph: as, *barographic records*.

barometer (ba-rom'e-tēr), *n.* [Gr. *βάρος*, weight, + *μέτρον*, a measure.] An instrument for measuring the weight or pressure of the atmosphere, invented by Evangelista Torricelli, an Italian mathematician and physicist, in 1643. The simplest form of this instrument is a glass tube over 30 inches long, sealed at one end, and then filled with mercury. When the tube is inverted, with the open end dipping into a cup or cistern of mercury, the column sinks, leaving a vacuum at the top, till the pressure of the atmosphere on each unit of surface of the mercury in the cistern equals the weight of the column in the tube over each unit of surface of the horizontal section at the level of the mercury outside, when the pressure of the column of mercury just balances that of the atmosphere.

The rise and fall can be measured on a graduated scale. Barometers of this form are called *cistern barometers*. They are the commonest of rough mercurial barometers. For scientific purposes, the most frequently used is Fortin's barometer, in which the cistern is adjustable, the zero of the scale coinciding with the extremity of an ivory pointer (a in second figure) which projects downward from the top of the cistern-box. The bottom of the cistern is made of leather, and by a screw working against a wooden button the mercury can be raised or lowered until its surface just touches the point of the index; this operation must be performed before each observation. The *siphon barometer* consists of a bent tube, generally of uniform bore, having two unequal legs. The longer leg, which must be more than 30 inches long, is closed, while the shorter leg is open; the difference of the levels in the two legs represents the pressure of the atmosphere. The *wheel barometer* usually consists of a si-

phon barometer having a float resting on the surface of the mercury in the open branch, and a thread attached to the float passing over a pulley, and having a weight at its extremity as a counterpoise to the float. As the mercury rises and falls the thread turns the pulley which moves the index of the dial. The barometer is used in many physical and chemical determinations, but its most ordinary applications are (1) to the prediction of changes in the weather, and (2) to the determination of the elevation of stations above the sea-level.—**Aneroid barometer**, a portable instrument, invented by M. Vidi of Paris, for indicating the pressure of the atmosphere without the use of mercury or other fluid. It consists of a circular metallic box which is exhausted of air, and of which the corrugated diaphragms are held in a state of tension by powerful springs. The varying pressure of the atmosphere causes a variation of the surface of the diaphragm, which variation, being multiplied by delicate levers and a fine chain wound around a pinion, actuates an index-pointer which moves over a graduated scale. Bourdon's metallic barometer is an aneroid barometer consisting of a flattened, curved tube, ex-

Bourdon's Metallic Barometer. *A*, front view, showing hand or indicator, *a*, and the scale; *b*, *e*, mercurial thermometers. *B*, back view: *d*, *a*, tube secured at its middle, *e*, and having its ends connected by links, *f*, *f*, to two short levers, *g*, *g*, on the same axis as the hand, *a*; *h*, open plate.

hausted of air and having one end fixed and the other geared to an index-pointer which traverses a graduated arc. The curvature of the tube is affected by variations in the atmospheric pressure, and the pointer is moved correspondingly on the dial.—**Marine barometer**, a cistern barometer adapted to the conditions of a ship's motion, being suspended by gimbals, and having a stricture in the tube to lessen the oscillations of the mercury.—**Pumping of the barometer**, an unsteadiness in the barometric column, due to a gusty wind.—**Self-registering barometer**, a barograph (which see).—**True height of the barometer**, the height of the barometer corrected to the standard density of mercury (that is, its density at the freezing-point of water), for variations of gravity, for the effect of capillarity, index-error, expansion of the scale, etc. The United States Signal Office also corrects for the elevation of the station above the sea-level. See *atmosphere* and *sympiesometer*.

barometer-flowers (ba-rom'e-tēr-flou'ēr-z), *n. pl.* Artificial flowers colored with chlorid of cobalt. In dry air they are blue, and in moist air they turn pink.

barometer-gage (ba-rom'e-tēr-gāj), *n.* An apparatus attached to the boiler of a steam-engine, to a condenser, or to some other chamber in which a more or less perfect vacuum is liable to be formed, to indicate the state of the vacuum. In one form a reversed U-tube has one end plunged in a basin of mercury and the other connected with the vacuum-chamber. Another common form is a U-tube partially filled with mercury, and having one end open to the air and the other connected with the vacuum-chamber. Any exhaustion in the chamber causes the mercury to rise in the leg connected with it and to fall in the other. The fluctuations are noted upon a scale placed between the two legs of the tube.

Two forms of Barometer-gage.—*a*, bent glass tube; *b*, mercury-cistern; *c*, *c*, points at which tubes connect with condensers; *d*, bend of tube containing mercury.

E. also *barron*, < ME. *baron*, *barun*, *baroun*, < OF. *baron*, *barun* (orig. acc. of *ber*) = Pr. *bar*, acc. *baron*, *baro* = Sp. *varon* = Pg. *varão* = It. *barone*, prop. a man (It. now a vagabond), then specifically one who was a 'man' or vassal of the king or other superior, whence the later use of the term as a title, *F. baron*, fem. *baronne*, whence, from *F.* or *E.*, in other languages, Sp. *baron*, Pg. *barão*, It. *barone*, G. Dan. Sw. *baron*, Icel. *barün*, Russ. *баронъ*, etc.; < ML. *baro(n)-*, a man (L. *homo* or *vir*), hence, in particular uses, vassal, servant, freeman, husband. Origin uncertain; by some connected through 'servant' with L. *baro(n)-*, a simpleton, blockhead, dunce.] 1. In Great Britain, the title of a nobleman holding the lowest rank in the peerage; a member of the baronage: as, *Baron Arundell of Wardour*; a Scotch *baron*. The children of barons have the title "Honorable." Originally the barons, being the feudatories of princes, were the proprietors of land held by honorable service. Hence in ancient records the word *barons* comprehends all the nobility. All such in England had in early times a right to sit in Parliament. Anciently barons were *greater*, such as held their lands of the king in *capite*, or *lesser*, such as held their lands of the greater barons by military service in *capite*. "The present barons are—(1) *Barons by prescription*, for that they and their ancestors have immemorably sat in the Upper House. (2) *Barons by patent*, having obtained a patent of this dignity to them and their heirs, male or otherwise. (3) *Barons by tenure*, holding the title as annexed to land." (Wharton.) Formerly, when all barons were not summoned to sit in Parliament, the name of *barons writ* was given to those who actually were so summoned. Barons in the peerages of Scotland and Ireland have seats in the British Parliament only when elected by their order. See *peer*. The word *baron* was not known in the British isles till introduced from the continent under the Norman princes. The coronet of a baron of England consists of a plain gold circle, with six halls or large pearls on its edge, and with the cap, etc., as in a viscount's.

2. A title of the judges or officers of the English Court of Exchequer, hence called *barons of the Exchequer*, the president of the court being called *chief baron*.—3. In *law* and *her.*, a husband: as, *baron and feme*, husband and wife.—4. On the continent of Europe, especially in France and Germany, a member of the lowest order of hereditary nobility: in Germany, same as *Freiherr*.—**Baron of beef**, in *cookery*, two sirloins not cut asunder.—**Barons of the Cinque Ports**, members of the British House of Commons formerly elected, two for each of the seven (originally five) Cinque Ports—Dover, Sandwich, Romney, Hastings, Iythe, Winchelsea, and Rye.

The whole body of British barons; formerly, the nobility or peerage in general.

In this use the word had not the specific sense that it received in the time of James I. "According to Spenser ('State of Ireland'), originally applied to gentlemen, not barons by tenure, summoned to the House of Lords by Edward III.; perhaps to the heirs of barons summoned by writ in their fathers' life-

2. A British title of hereditary rank or degree of honor next below that of a baron, and thus not conferring a peerage; the only title of hereditary knighthood. A baronet is designated Sir So-and-so, Bart. (Christian name and surname being given), and ranks above all knights except those of the Garter. There is no ceremony of investiture, the title being given by patent. The order was founded by James I. in 1611, professedly to promote the English and Scotch colonization of Ulster, for which each baronet paid £1,080. The original limitation of the order to 200 members was set aside and the payment remitted at an early date. (For the badge of the order, see *badge of Ulster*, under *badge*.) The title is abbreviated *Bart.* after a name.—**Baronet's hand**, the bloody hand of Ulster. See *badge of Ulster*, under *badge*.—**Baronets of Ireland**, an order of knights baronets founded by James I. of England, in the seventeenth year of his reign (1619), for the same purpose and with the same privileges in Ireland as had been conferred on the order created in England in 1611.—**Baronets of Scotland**, an order instituted by Charles I. of England in 1625. The nominal object was the settlement of Nova Scotia, and patents were granted under the great seal of Scotland, as those of the Ulster baronets had been granted under the great seal of England. After the union of the crowns in 1707 the baronets of Scotland changed their arms with the badge of Ulster, and became baronets of the United Kingdom. The baronets of Scotland are often called Nova Scotia baronets. None have been created since the union.

2. Specifically, in *arch.*, applied to a style of decoration which prevailed in Europe during a great part of the eighteenth century, and may be considered to have begun toward the close of the seventeenth century. It is nearly equivalent to the Louis XV. style, and is distinguished by its clumsy

forms, particularly in church architecture, and its contorted ornamentation, made up in great part of meaningless scrolls and inorganic shell-work. Also called, sometimes, the *Jesuit style*, from the many and remarkably ugly examples supplied by churches founded by the Jesuit order. This word is often used interchangeably with *rococo*; but *rococo* is preferably reserved for ornament of the same period, particularly in France, which, though overcharged and inorganic, still retains some beauty and artistic quality; *baroque* implies the presence of ugly and repellent qualities.

A vessel or cask of a cylindrical form, generally bulging in the middle, usually made of wooden staves bound together with hoops, and having flat parallel heads.—2. As a measure of capacity, the quantity of anything, liquid or solid, which a barrel should contain. In English metrology there were four principal kinds of barrels: the wine-barrel of 31½ wine gallons; the London ale-barrel of 32 beer gallons; the country ale and beer-barrel of 34 beer gallons; and the London beer-barrel of 36 beer gallons. The wine-barrel was legalized in the reign of Richard III., the others under Henry VIII. Under George III. the barrel of ale or beer for town and country was made 36 gallons. Oil, spirits, tar, and pork were measured by the wine-barrel; vinegar, by the barrel of 34 gallons. A barrel of eels or herrings contained 30 gallons by a statute of Henry VI., but by another of Edward IV. this was made 42 gallons. Salmon and spruce beer were also measured by barrels of 42 gallons. A barrel of beef, wet codfish, or honey contained 32 wine gallons; but honey was sometimes sold by barrels of 42 gallons of 12 pounds each. By a statute of George III., a barrel of fish was made 38 wine gallons; but a barrel of salt pilchards or mackerel measured 50 gallons. The barrel of apples, coal, or nuts contained 3 Winchester bushels, each of 8 gallons, dry measure. The barrel of anchovies contained 16 pounds; of gunpowder, 100 pounds; of raisins, 1 hundredweight; of candles, 120 pounds; of *barilla*, potash, or butter, 2 hundredweight (but only 106 pounds of Essex butter, and 156 of Sussex); the barrel of soap, 256 pounds. A barrel of plates, by a statute of Charles II., contained 300 pounds. There were besides a great variety of other barrels in Scotland and Ireland. In England the barrel is no longer a legal measure. In the United States the barrel in liquid measure is commonly 31½ gallons, and for solid substances it is generally a unit of weight, a barrel of flour, for example, being 196 pounds, and a barrel of beef or pork 200 pounds. In Maine a barrel of fish is by law 200 pounds. In Louisiana a barrel in dry measure is 3½ bushels. The bushels vary in different States. On the continent of Europe, previous to the introduction of the metric system, there were many barrels. In each state of Italy the *barile* for wine was a little smaller than that for oil; they were about 30 to 60 liters. The *baril* of Normandy was about 60 Paris pints. The *barat* of Montpellier was 25½ liters; the *barrallon* of Barcelona, 30½ liters; the *baril* of Riga, 137½ liters. The *barrique* was commonly larger than the *baril*. The abbreviation is *bb.*, *pl. bbls.*

Olivin and nephelin are also often found in the basalts, especially the former. Apatite, leucite, and haüyne are occasionally present. The basalts have been variously classed by different writers. Basalt proper is the dark, compact variety, breaking with a splintery fracture. Under the name *doerlrite* are included all the more coarsely crystallized varieties in which the component minerals can be made out with the naked eye, while *analcite* is the name given to those varieties which have a finely granular texture. In the modern eruptive rocks basalt has almost always been the last rock to be emitted from the volcanic orifice. The cooling of lava often gives rise to the formation of hexagonal prisms or columns, which are occasionally extremely regular in form and of great size. Basalt displays this structure more frequently and in greater perfection than any other rock; hence this kind of structure is frequently called *basaltic*. (See cut.) 1, from nave of Lyons cathedral, 13th century; 2, from eastern porch of Frechtbeim, Athens, 5th century A. C.; 3, from nave of Orvieto cathedral, 13th century. 4, Attic base: A, C, E, fillets; D, upper torus; F, lower torus; G, plinth, or stylobate.

the shaft rests in columns of nearly all styles. It appears in most Egyptian forms, but is not present in the Greek Doric column, of which the shaft rests directly on the stylobate. In purely Hellenic examples of the Ionic and Corinthian the base consists of various combinations of moldings on a circular plan, without the awkward square plinth which was universally adopted by the Romans, and was generally retained in the elaborately molded bases of Byzantine and medieval architecture. See *cut under column*.

4. (a) In *zool.*, and *bot.*, the extremity opposite to the apex; the point of attachment, or the part of an organ which is nearest its point of attachment: as, the *base* of a leaf; the *base* of a shell. The point of attachment of an anther, however, is sometimes at the apex. (b) In *zool.*, also, that part or extremity of anything by which it is attached to another of higher value or significance.—5. In *chem.*, a compound substance which unites with an acid to form a salt. The term is applied to the hydroxids of the metals, to certain metallic oxids, and to groups of atoms containing one or more hydroxyl groups (OH) in which hydrogen is replaceable by an acid radical.

6. In *phar.*, the principal ingredient of any compound preparation.—7. In *crystal.*, same as *basal plane* (which see, under *basal*).—8. In *petrolog.*, the amorphous or isotropic portion of the ground-mass of a rock. This may possess a certain amount of structure, rendering it distinct from glass, while not crystalline, when it is known as a *microfelsitic base*. If a true glass, it may be, according to the amount of devitrification products present, *microfelsitic*, *globulitic*, or *glassy*. In some recent andesitic lavas it possesses a peculiar appearance, so similar to felt that it is known as a *felt-like base*. The term *magma* (which see) has also been used by some writers as equivalent to *base*.

9. In *dentistry*, the setting for artificial teeth.—10. In *dyeing*, a substance that has an affinity for both the cloth and the coloring matter; a mordant.—11. 13. In *arith.* and *algebra*, a number from the different powers of which all numbers are conceived as produced. The base of a system of arithmetical notation is a number the multiples of whose powers are added together to express any number; thus, 10 is the base of the decimal system of arithmetic. In the theory of numbers, the base of an index is a number which, being raised to the power represented by the index, gives a number congruent to the number whose index is spoken of. The base of a system of logarithms is the number which, raised to the power indicated by the logarithm, gives the number to which the logarithm belongs. The *Napierian base*, or base of the Napierian system of logarithms, is the number represented by the infinite series,

$$1 + 1 + \frac{1}{2} + \frac{1}{2^2} + \frac{1}{2^3} + \frac{1}{2^4} + \frac{1}{2^5} + \text{etc.}$$

base-ball (bās'bāl'), *n.* 1. A game of ball played by eighteen persons, nine on a side. A square plot of ground called the diamond, with sides 90 feet long, is marked off, at the corners of which are the bases, known as *home* or *home base* (B), *first base* (D), *second base* (E), and *third base* (F). The players on one side take their positions in the field, the *catcher* (A) just behind the home base, the *pitcher* (C) at a distance of 60 feet from the home base on the line from home to second base, the three *basemen* near first, second, and third base, the *short-stop* (G) between second and third, and three *fielders*, known as *right* (H), *center* (I), and *left* (J), at some distance behind and on each side of the second base. The pitcher pitches the ball over the home plate to the catcher. One of the other side, which is said to be *in*, or *at the bat*, takes a position by the home base, and tries to strike the ball as it passes him. If he knocks it into the air, and one

of the other side catches it before it reaches the ground, the striker is *out* or *caught out*, that is, retires from the bat, and another takes his place. Should the ball pass outside the line from home to first or from home to third base continued indefinitely, it is a *foul*, and does not count at all, unless it is caught before it touches the ground, in which case the striker is out. Should it strike inside these lines, the batter runs to first base, and then or later to second, third, and home base. If he reaches home base he scores a *run*. Should the ball be thrown to and caught by a player standing on first base before the batter succeeds in reaching it, or should the batter be touched with the ball in the hands of any of his adversaries while running from one base to another, he is out. One player after another of the side which "is in" goes to the bat until three men have been put out. This constitutes an *inning*. Nine innings for each side make a game, and that side which succeeds in making the greater number of runs wins the game.

In the process of triangulation, the angles of these triangles and the length of a single side (the base or base-line) being known, the lengths of all can be computed. In every great survey a number of base-lines are measured, each being from 3 to 10 miles in length.

=*Syn.* *Bashfulness*, *Modesty*, *Diffidence*, *Shyness*, *Coyness*, *timidity*, *sheepishness*. *Bashfulness*, literally readiness to be abashed, designates timidity and a disturbed state of feeling at meeting with others, or being brought into any prominence. It is natural and not unbecoming to the young, but with advancing years seems a defect; it is often a transient state of feeling. *Modesty* goes deeper into the character; it is either a proper and becoming distrust of one's self and one's powers, or a high-minded freedom from assurance and assumption; it is always an excellence, unless explicitly said to be excessive. *Diffidence* is a defect; it is an undue distrust of self, with fear of being censured for failure, tending to unfit one for duty. *Shyness* is simply a constitutional shrinking from contact with others; it is the result of sensitiveness. *Coyness* is shyness where advances are made by others; a shrinking from familiarity, perhaps in a coquetish way.

Yet unask'd,
His *bashfulness* and tenderness at war,
He set himself beside her.

Quoted in N. and Q., 1st ser., VIII, 40.

basilica¹ (ba-sil'ik-ä), *n.* [L., < Gr. *βασιλική*, a basilica, prop. fem. (se. *στοά*, *stoa*, or *oikia*, house) of *βασιλικός*, royal: see *basilik*. In sense 5 for *basilik*, 4. *basil*².] **1.** Originally, the stoa in which the king-archon dispensed justice in Athens; hence, in *Gr. antiq.*, a frequent distinctive name for a stoa or portico.—**2.** In Rome, where such buildings were introduced about two centuries before Christ, a portico or hall recalling in plan or use the Athenian royal portico. Many of these halls of justice were appropriated for Christian churches, and new churches were built upon a similar plan, whence *basilica* became a usual name for a church. The typical plan of the basilica is an oblong rectangle, with a broad central nave separated from two side-aisles by rows of columns. Over the aisles are galleries. At the extremity of the building furthest from the chief entrance is a raised tribune, where sat originally the Roman pretor or judge and his assessors, and which naturally became the sanctuary of the Christian church. This tribune usually constitutes an apse of the width of the nave, projecting from the main body of the building, and covered with a vault on a semi-circular plan. The Christian high altar, which has replaced the throne of the Roman pretor, stands properly in the center of the chord of this apse. Variations from the typical plan are of very common occurrence, such as the absence of an architectural apse; the presence of an apse at each end—a favorite arrangement, especially in early German churches of basilican plan; the duplication of the side-aisles; the carrying of an aisle around the apse; the presence of a transept between aisles and apse, or of minor apses on each side of the chief apse; and many others, often suggested either by accidents of position or by the exigencies of the Christian ritual.

3. Liturgically, in the *Rom. Cath. Ch.*, a title conferred by the pope on a church without reference to its architectural arrangement, and carrying with it certain honors and privileges. In addition to the five major or patriarchal basilicas and the eight minor basilicas at Rome, the title is borne in this sense by other churches in all parts of the world, as the cathedrals of Paris and Rheims in France, and the cathedral of Notre Dame at Quebec.

4†. In the middle ages, a name sometimes given to the elaborate structures raised over important tombs, as that over the tomb or shrine of Edward the Confessor in Westminster Abbey: so called, according to Ducange, because these structures bore a resemblance to diminutive churches.—**5†.** A large piece of ordnance: probably same as *basilisk*, 4.

The breaching artillery consisted of sixty-three guns, the smallest of which threw a ball of fifty-six pounds, and some few, termed *basilicas*, carried marble bullets of a hundred and twelve pounds weight. Prescott.

It consists of yellow wax, black pitch, and resin, of each one part, and of olive-oil four parts. Also called *basilican ointment*.

Basilics (ba-sil'iks), *n. pl.* [E. pl., equiv. to ML. *basilica*: see *Basilica*².] Same as *Basilica*².

Basilidian (bas-i-lid'i-an), *n.* [*Basilides*, < Gr. *Βασίλειδης*, a proper name, in form a patronymic, < *βασιλεύς*, king.] A follower of Basilides, a teacher of Gnostic doctrines at Alexandria, Egypt, in the second century. The Basilidians discouraged martyrdom, kept their doctrines as secret as possible, were much given to magical practices, and soon declined from the asceticism of their founder into gross immorality. See *Basilidianism*.

Basilidianism (bas-i-lid'i-an-izm), *n.* [*Basili-dian* + *-ism*.] The doctrines of Basilides and the Basilidians. Basilides taught that from a universal seed-mass containing the germs of all things and created by non-existent Deity (that is, the Absolute) were separated a subtle sonship mounting at once to the Deity, and a coarse sonship attaining a place near to but short of the highest by aid of the Holy Spirit, which acts as the firmament separating supermundane things from mundane. A third sonship, that needing purification, remained in the mass, from which also emerged the archons of the ogdoad and hebdomad. See *archon*. The gospel illumination came first to the son of the great archon, who instructed his father. From him it passed to the archon of the hebdomad through his son, and from the hebdomad to Jesus, the son of Mary. The spirit of Jesus ascended at his death to the highest God, leaving his soul in the hebdomad. When the whole of the sonship that remains in this lower world has mounted after Jesus to the highest place, the consummation of all things will come, and an oblivion called the great ignorance will descend on the whole world, even upon the two great archons, that all may remain in their natural place and not aspire after the unattainable. The gospel is the knowledge of these doctrines, and the spiritual are those only who are capable of understanding them. An exceedingly different system, known as *spirituous Basilidianism*, was developed among the followers of Basilides. According to this there are 365 generations of angels occupying 365 heavens, each with its own archon, the lowest being the God of the Jews. Christ was the first-born, the Nous or intellect of the highest God, the unbegotten Father. All his work on earth is mere appearance or outward show, a doctetic feature found in many earlier heresies.

basiliscine (bas-i-lis'in), *a.* [*basiliscus*, a basilisk, + *-ine*.] Pertaining to a basilisk.

basiliscus (bas-i-lis'kus), *n.* [L., a basilisk: see *basilisk*.] **1†.** A basilisk.—**2†.** [NL.] In *ornith.*, an old and disused name of the small crested or golden-crowned wren of Europe, *Regulus cristatus*. It is known in many languages by names corresponding to "little king," as *kinglet*, *roitelet*, *köninglein*, *regillo*, *regaliolus*, *regillus*, etc.; also *rex*, *senator*, *presbys*, *trochilus*, *orchillus*, *calendula*, etc. See *Regulus*.

3. [cap.] [NL.] A genus of saurian reptiles, or *Lacertilla*, of the family *Iguanide* (formerly held to be of greater extent than now), characterized essentially by the presence of a continuous median dorsal crest along the back and tail, erectile at will. There are no femoral pores, and no gular sac, but a dilatable pouch on the head; the dentition is pleurodont. The mitered or hooded basilisk, *B. mitratus*, is especially remarkable for a membranous bag at the back of the head, of the size of a small hen's egg, which can be inflated with air at pleasure, and the function of which is analogous to that of the air-bladder of fishes. The other species have such hoods also, but of a smaller size. To this organ they owe their name, which

recalls the basilisk of fable, though in reality they are harmless and exceedingly lively creatures. The species are inhabitants chiefly of Central America and Mexico, and peculiar to America, although one of the *Agamidæ* of Amblyna has been erroneously referred to the genus.

basilisk (bas'is-lisk), *n.* and *a.* [Also, until recently, as L., *basiliscus*; < ME. *basilisk* (cf. also *basilicok* and F. *basilic*), < L. *basiliscus*, < Gr. *βασιλισκος*, a little king, a kinglet (bird), also a kind of serpent, so named from a white spot resembling a crown on the head; dim. of *βασιλεύς*, a king.] **I. n. 1.** A fabulous creature formerly believed to exist, variously regarded as a kind of serpent, lizard, or dragon, and sometimes identified with the cockatrice. It inhabited the deserts of Africa, and its breath and even its look were fatal. In heraldry it is represented as an animal resembling the cockatrice, with its tail terminating in a dragon's head; hence formerly also called *amphisien cockatrice*, as having two heads. See *amphisien*.

Like as the Basiliske, of serpents seede,
From powrefull eyes close venim doth convey
Into the lookers hart, and killeth farre away.

Spenser, F. Q., IV. viii. 39.

There is not one that looketh upon his eyes but dieth presently. The like property has the *basilisk*. A white spot or star it carrieth on the head and setteth it out like a coronet or diadem. If he but hiss no other serpent dare come near.

Holland, tr. of Pliny, viii. 21.

2. In *herpet.*, a lizard of the old genus *Basiliscus* (which see) in the widest sense.—**3†.** In *ornith.*, the golden-crested wren or kinglet. See *basiliscus*, 2.—**4†.** A large piece of ordnance: so called from its destructive power. It varied greatly in size and style at different times. In the fifteenth century it is spoken of as throwing stone balls of the weight of 200 pounds, and was therefore of prodigious caliber. D'Aubigné in his History speaks of them as carrying stone balls of 300 pounds, but it is not certain which standard he has in view. In the seventeenth century it was a smaller gun, but still one of the largest then in use. See *basilica*, 5.

Awake, ye men of Memphis!—hear the clang
Of Scythian trumpets!—hear the *basilisks*,
That roaring, shake Damascus' turrets down!

Marlowe, Tamburlaine, I, iv. 1.

A *basilisco*, bore in inches 5, weight in pounds 4000.

[According to the rules of zoological nomenclature, the operation of the law of priority requires retention of the name, though the creatures were not saurians.]

Basilosaurus (bas'is-lō-sā'rus), *n.* [NL., < Gr. *βασιλιεύς*, king, & *σαῖρος*, lizard.] A genus of large fossil cetaceans from the Eocene of the southern United States. appar. for **baccinus*, **baccinum*, prop. an adj. form, < *bacca*, a bowl ('vas aquarium': see *back*³), perhaps of Celtic origin; cf. Gael. *bac*, a hollow, a hook, crook, = W. *baeh*, a hook, = Bret. *bab*, *bag*, a shallow boat; see *back*³. Hence *basinet*. 1. A circular dish or vessel of greater width than depth, contracting toward the bottom, and used chiefly to hold water or other liquid, especially for washing, but also for various other purposes.

In the arts and manuf.: (a) In *hat-making*, a vessel filled with boiling water in which the loose mat of felted fur formed on the cone for a hat-body is dipped in the process of basining (see *basin*, v. l.), in order to shrink it to the proper size. 8. In *geog.*: (a) The area drained by a river. The term is ordinarily used only when speaking of a large river, and then includes the entire area drained by the main stream and its tributaries. The line separating two river-systems from each other is the watershed. A closed basin is an area which has no outlet to the sea. In the United States, the Great Basin is that portion of the Cordilleran region which has no such outlet, comprising an area of about 225,000 square miles. (b) A basin-shaped depression or hollow; a circular or oval valley.—9. In *geol.*, an area over which the stratified formations are so disposed as to show that they were deposited in succession within a basin-shaped depression of the original surface, thus giving rise to a series of beds which have a general dip toward a common center, especially near the edges of the area. In some instances the basin structure is very marked, as in the case of the Forest of Dean and Inde coal-fields. Sometimes, however, a mere synclinal depression of the strata is called a basin; and this is especially the case in the Appalachian coal-field, where any smaller area, separated by erosion from the main body of the coal-bearing strata, may be called a basin. The geological basins of London and Paris are especially known and interesting. The rocks of both are chiefly Lower Tertiary, or Eocene and Oligocene, the name sometimes given to that part of the series which is intermediate in age between Eocene and Miocene. The important member of the London basin—the "London clay"—is absent from the Paris basin. The Middle Eocene is represented in the Paris basin by an extremely fossiliferous rock, the *Calcaire grossier* (which see). The Tertiary of the Paris basin, like that of the London basin, rests on a thick mass of white chalk. This has been completely bored through at various points, for the purpose of obtaining water, which rises above the surface in large quantities at the wells of Grenelle and Passy, and at other points.

ly of very simple form, named from its resemblance to a little basin. It was ordinarily worn alone; but in battle the heavy helmet or heaume was placed over it, resting upon the armor of the neck and shoulders. When the heaume came to be abandoned, on account of its great weight, the basinet was furnished with a vizor. It was the commonest form of headpiece during the thirteenth and fourteenth centuries, and so continued until the introduction of the armet. See *helmet*, *visor*, *armitte*, *canail*, and *armor*.

A natural child; a child begotten and born out of wedlock; an illegitimate or spurious child. By the civil and canon laws (a rule adopted also in many of the United States), a bastard becomes a legitimate child by the marriage of the parents at any future time. But by the laws of England a child, to be legitimate, must at least be born after the lawful marriage; it does not require that the child shall be begotten in wedlock, but it is indispensable that it should be born after marriage, no matter how short the time, the law presuming it to be the child of the husband. The only legal incapacity of a bastard is that he cannot be heir or next of kin to any one save his own issue. Inheritance from the mother is allowed in some jurisdictions. In England the maintenance of a bastard in the first instance devolves on the mother, while in Scotland it is a joint burden upon both parents. The mother is entitled to the custody of the child in preference to the father. In the United States the father may be compelled to provide support.

Many French cities had bastilles of this kind in feudal times, but the one especially known is that of Paris, called specifically the *Bastille*. It commanded the *Fort St. Antoine*, and its erection was begun by Charles V. in 1369. This, being of peculiar strength, remained after the other medieval fortifications of the city had been removed, and its use as a prison for persons confined at the arbitrary will of the king or his ministers gave it celebrity as a reputed stronghold of royal despotism and cruelty. It was stormed with much bloodshed by the populace July 14, 1789, and was demolished

shortly afterward. There were delivered from the prison-cells four forgers, two lunatics, and a nobleman who had been confined at the demand of his family.

bat² (bat), *n.* [*A corruption of earlier back, bak, Se. back, bak (also bakie-bird, bakkie-bird), a bat, < ME. bakke, bucke, < Dan. bakke, in comp. aftenbakke, evening-bat, = OSw. bakka, in comp. natt-bakka, night-jar, Sw. dial. nattabattu, natt-blakka, = Icel. blaka, in comp. ledur-blaka, bat, lit. leather-flapper, < blaka, flutter, flap. The orig. form is uncertain. Cf. ML. blatta, blacta, batia, a bat, another application of L. blatta, an insect that shuns the light, a cockroach: see Blatta*¹. For the change of *k* to *t*, cf. *E. make*² = *mote*, and *E. crane* = *Dan. crane, Sw. trana, Icel. trani*. The AS. name of the bat is *hræcniūs*, > *E. remouse*. The G. name is *fledermaus*; cf. *E. flittermouse*.] A wing-handed, wing-footed flying mammal, of the order *Chiroptera* (which see). The species are upward of 450 in number, nearly cosmopolitan, but largest, most varied in character, and most abundant in individuals in tropical and subtropical countries. The species of temperate countries, as of the United States and Europe, are comparatively few, small, and of such uniform characters that they give little idea of the extent and diversity of the order in warmer regions. Bats are the most aerial or volant of all animals, even more so than birds or insects, for they have scarcely any other means of locomotion than flying. They are

nocturnal and crepuscular, passing most of the daytime in dusky retreats, where they gather sometimes in almost incredible multitudes, and generally repose hanging head downward by their hind feet. In size they range from less than the size of a mouse to large forms with some five feet spread of wing. The body is usually softly furry; the wings are membranous and naked. The great majority

Hoary Bat (*Lasurus fruinus*).

are insectivorous and carnivorous, and constitute the sub-order *Animalivora* or *Insectivora*; of these, a few prey upon other bats, and some, of the genera *Desmodus* and *Diphylla*, suck the blood of large animals; but the great bats of South America called *vampires* are chiefly frugivorous. See *Desmodontes, Vampyr*. The old-world fruit-bats, flying-foxes, or roussettes are mostly large species, constituting the family *Pteropodidae* and suborder *Frugivora*. See *ent* under *flying-fox*. The physiognomy of many of the bats is grotesque, owing to the extraordinary appendages of the snout, especially in the families *Rhinolophidae* and *Phyllostomatidae*, or horseshoe bats and leaf-nosed bats. The ears, too, are often of great size and much complexity of detail, and, like the various appendages of the face, and the wing-membranes themselves, serve as tactile organs of extreme delicacy, even to the extent of sensing objects without actual contact. The wings of bats are commonly given to representations of evil geni and demons, as those of birds are attached to good angels. The large bat represented on Egyptian monuments is one of the fruit-bats, the *Cynonycteris egyptiaca*. The Hebrew name of the bat of the Old Testament, *atalaph*, is now used in the form *Atalapha* for a genus of American bats. The commonest species of the United States are the small brown bat, *Vesperugo subulatus*, and the red bat, *Lasurus noveboracensis*. Among European species may be noted the serotine (*Vesperugo serotinus*), the pipistrelle (*V. pipistrellus*), the barbastel (*Barbastellus communis*), the oreillard (*Plecotus auritus*), and the horseshoe bats (*Rhinolophus hipposideros* and *R. ferocquinum*). In heraldry the bat is always represented displayed, that is, with the wings opened, and is often called by its older name *remouse*.—**Bat's wing**, in *anat.* See *ala vesperilionis*, under *ala*.—**Bat's-wing burner**. See *burner*.—**Bulldog bats**, the molossid chiropterans. See *Molossus*.—**Harlequin bat**. See *harlequin*.

Such baths have been recommended as useful in certain diseases, in which an increased expansive force is required to cause the air to inflate the more delicate air-passages of the lungs.—Dung-bath, a bath used in calico-printing. See *dunping*.—Knights of the Bath, an order of knighthood supposed to have been instituted at the coronation of Henry IV. in 1399. It received this name from the fact that the candidates for the honor were put into a bath the preceding evening, to denote a purification or absolution from all former stain, and that they were now to begin a new life. The present order of the Bath, however, was instituted by George I. in 1725, as a military order, consisting, exclusive of the sovereign, of a grand master and thirty-six companions. In 1815 the order was greatly extended, and in 1847 it was opened to civilians. It is now composed of three classes, viz.: military and civil knights grand-crosses, G. C. B.; knights commanders, K. C. B.; and knights companions, C. B. The

That of the knights grand-crosses (fig. 2) is of silver, with eight points of rays wavy, on which is a gold cross bearing three crowns, encircled by a ribbon displaying the motto of the order, while beneath is a scroll inscribed *Ich dien* (I serve), the motto of the Prince of Wales. The star of the knights commanders differs chiefly in lacking the wavy rays.—**Medicated bath**, a bath of liquid or vapor designed to produce a curative effect by virtue of some medicine mixed in it.—**Mercurial bath**, a bath used in the pneumatic trough to collect such gases as are readily absorbed by water.—**Metal-bath**, a bath used in chemical operations requiring a higher temperature than can be produced by means of a water-bath. Mercury, fusible metal, tin, and lead are employed for such baths.—**Russian bath**, a kind of bath employed in Russia, and introduced thence in other countries. It resembles in principle the ancient and the Turkish baths, but differs from the latter in that the subject, after exposure to the influence of very hot vapor, with the attendant kneading, lathering, etc., is suddenly and violently cooled by means of a jet of ice-cold water. It is said to be of service in alleviating rheumatism.—**Sour bath**, in *tanning*, an acid liquid made of bran and refuse malt. It is employed to remove the lime used in a previous process, and also to soften the skin to render it more absorbent of the tanning materials.—**Tin-bath**, molten tin covered with melted tallow to prevent the oxidation of the metal. It is used in giving a coating of tin to other metals, as sheet-iron, to form the so-called tin-plate.—**Turkish bath**, a kind of bath introduced from the East, in which the subject, after having undergone copious perspiration in a heated room, is subjected to various processes, as soaping, washing, kneading (shampooing), etc., and ultimately proceeds to an outer apartment, where he is placed on a couch to cool. Turkish baths, or modifications of them, are provided in all hydrotherapeutic establishments, and are to be found in most towns of considerable size.—**White bath**, a bath used in dyeing; an emulsion formed by Gallipoli oil and the carbonates of alkalis.

It is here left open whether there be any form of force which may be especially designated as "vital." Many of the animal functions are known to be physical and chemical, and if there be any one which appears to be less explicable by reference to these forces than the others, it is that of nutrition. Probably in this instance force has been so metamorphosed through the influence of the originative or conscious force in evolution, that it is a distinct species in the category of forces. (b) Specifically, to attempt to breach an enemy's works by means of a battery mounted in the third parallel. To *batter* in breach, a sufficient number of guns should be employed to maintain a practically continuous fire, so as to prevent the enemy from repairing the damage, and to obtain the cumulative effect due to heavy firing against a single point. Breaching is sometimes accomplished by firing simultaneous or alternate volleys from two or more batteries.

elect., a voltaic cell, or more properly a number of voltaic cells (see *cell*) arranged together so as to give a powerful current of electricity.

The way in which the cells are coupled depends upon the nature of the current which is desired and the relation between the external and internal resistance. (See *resistance*.) For example, if the cells are arranged in series, the copper of the first with the zinc of the next, and so on, the result is to give the maximum electromotive force; on the other hand, if arranged abreast, all the zines being connected together, and all the copper plates together, the electromotive force is the same as for a single cell, but the internal or *battery* resistance is diminished, and hence the strength of the current or the quantity of electricity may, under certain conditions, be much increased. The first method is sometimes spoken of in popular language as the arrangement for *intensity*, the second for *quantity*. An early form of *battery* was *Volta's pile*, and another his *couronne des tasses*, or "crown of cups." The different kinds of *battery* are named according to the materials or the form of the cells of which they are composed, or the way in which the cells are arranged. Some of the commoner kinds are the *Daniell*, *Grove*, *Bunsen*, *Le Clanché*, *gravity*, *bichromate*, etc. For a description of these and others, see *cell*.

perpendicular to the interior crest of the enemy's works: so called in contradistinction to a *direct* battery.—**Open battery**, a battery entirely exposed, that is, unprotected by a parapet.—**Plunge-battery**, an electric battery so arranged that the metals can be removed from the liquid when not in use.—**Raised battery**, a battery whose terreplein is elevated considerably above the ground. *Tidball*.—**Redan battery**, a battery giving a cross or flanking fire from a salient or reentrant angle of a fortification.—**Reverse battery**, a battery which fires directly or obliquely upon the rear of a work or line of troops.—**Ricochet battery**, a battery which fires horizontally or at a low angle of elevation, so that the projectiles graze and bound along the surface of the ground or water. Smooth-bore guns firing spherical projectiles are most effective for ricochet fire.—**Siege-battery**, a battery for siege operations. Such batteries are either *fixed*, comprising siege-guns and mortars of the heaviest caliber and largest size, or *movable*, consisting of field-guns and small mortars.—**Storage battery, or secondary battery, in elect.**, a combination of secondary cells or accumulators which when once charged may be used for a considerable time after as a source of an electrical current. The *Planté* cell consists essentially of two plates of metallic lead (C, C') rolled into a spiral form, and in the improved *Faure* form covered

with red oxid of lead; the primary current with which the cell is charged (by the wires G and H) serves to peroxidize and reduce this coating, respectively, on the sheets connected with the two poles; the chemical energy thus stored up is given back in the form of a continuous and regular electric current when the poles of the charged cell (A, A') are connected and the chemical action is reversed.—**Sunken battery**, a battery in which the sole of the embrasure is on a level with the ground, and the platform is consequently sunk below it. (*Tidball*.) The parapet is formed from the earth excavated from the site constituting the platform.—**Half-sunken battery**, a battery of which the parapet is formed partly from earth taken from the inside or terreplein, and partly from a ditch outside.—**Urticating batteries, in zool.**, the nematocysts or thread-cells of hydroid polyps.—**Water-battery**, an electric battery in which the liquid employed is water. It is useless as a source of a current, because of the high resistance of the water, but, by having a large number of zinc-copper couples, a high and constant difference of potentials is obtained at the two poles; it is thus valuable in many electrostatic experiments.

A fight, hostile encounter, or engagement between opposing forces on land or sea; an important and systematic engagement between independent armies or fleets. *Actions and affairs* are engagements of less magnitude than *battles*, and are often unpremeditated, the result of surprises, or the meeting of armed reconnoitering parties, though the latter is usually termed a *skirmish*. *Battles* are classed as *parallel* or *oblique*, according to the relative positions of the contending armies in order of battle; *strategic*, when fought upon an objective point selected in planning a campaign, as were the battles of Marengo and Nashville; *general*, when the whole or the greater part of both armies are engaged; *partial*, when only brigades, divisions, or army corps are brought into action; *offensive*, when an army seeks the enemy and attacks him wherever he is encountered; *defensive*, when a position is selected with the design of awaiting and repelling the enemy; *mixed* or *defensive-offensive*, when an army selects and occupies a position in advance, awaits the approach of the enemy, and at the proper moment moves out to engage him.

Battle-range, the range best suited to firing on an enemy's line of battle. Upon the rear sights of the latest military rifles the elevation corresponding to that range is designated by stamping the letter "B" opposite the battle-range elevation. This range is 262 yards, corresponding to a continuous dangerous space of 337 yards, for the Springfield rifle, caliber .45, used against foot-troops.—**Battleroyal**. (a) A battle with fists or cudgels, in which more than two combatants are engaged; a free fight. (b) A fight of game-cocks, in which more than two are engaged.—**Drawn battle**, a battle in which neither party gains the victory.—**Order of battle**. Same as *wager of battle*.—**Wager of battle or battel**, in *law*, a species of trial for the decision of controversies used among the rude military peoples of Europe. It was introduced into England by William the Conqueror, and practised in three cases only: in the court martial, or court of chivalry or honor; in appeals of felony; and in issues joined upon a writ of right. The contest was held before the judges on a piece of ground inclosed, and the combatants were bound to fight till the stars appeared, unless the death or defeat of one party sooner decided the contest. The weapons used were batons or staves an ell long. Women, priests, men above sixty, and lame and blind persons might appear by champions. Though long fallen into desuetude, it was a valid and legal mode of trial in England down to 1818, and was then formally abolished in consequence of the demand by the defendant in a suit for this mode of arbitrament, and of the fact that this demand could not legally be denied him.—**Syn. 1.** *Battle, Engagement, Conflict, Fight, Combat, Contest, Action.* *Battle* is a general term, and the most common. It is the appropriate word for great engagements: as, the *battle* of Waterloo. A *battle* may last merely a few hours or for days: as, the *battle* of Gettysburg lasted three days. *Engagement* is in technical military usage practically equivalent to *battle*, but it is a less forcible word. *Conflict*, literally, a clashing together, is a strong word, implying fierce physical encounter. *Fight* has the energy of a monosyllable; it denotes actual conflict. A man may take part in a *battle* without actually fighting. A *battle* may include many *fights*: as, the *fight* at the flag-staff in the *battle* of the Alma; or it may itself be described as a *fight*. *Combat*, like *conflict*, is a word of more dignity than *fight*; it is by its history suggestive of a struggle between two, as persons, animals, squadrons, armies. *Contest* is a very general word, of uncertain strength, but often joined with a strong adjective: as, a stubborn *contest*. An *action* is a minor or incidental act of war, a single act of fighting: as, the whole *action* lasted but an hour. All these words apply equally to operations by land or by sea. See *encounter* and *strife*.

To exist; have existence or being; possess reality; be the case; be true or real.

To be, or not to be, that is the question.

Shak., Hamlet, iii. 1.

Creatures which only are, and have a dull kind of being not yet privileged with life.

Sir T. Browne, Religio Medici, i. 34.

Time was, Time is, and Time shall be no more.

2. To take place; occur; happen; come about: as, the wedding will be to-morrow; his birthday was last week; it was to be.—3. Usually, *be* is a mere copula, or sign of predication, a link between a subject and a predicate. As such it asserts, or expresses as fact, the inclusion of the subject among the things denoted by the predicate, or the possession by the subject of the characters signified by the predicate; and this it does with temporal and modal modifications, while the whole substance of the predication, or all that is predicated, is expressed separately, in noun or adjective form, or the equivalent of such: thus, *I am good*, *he was a hero*, *they will be there*, *we should have been beloved*. Hence, every other predicating word or verb may be analyzed into a form of *be*, expressing the predication, and an adjective or noun expressing what is predicated: thus, *he loves into he is loving*, or *he is a lover*, and so on. Such a copula is possessed by many languages, being, as in English, reduced to that value by gradual attenuation of an originally substantial meaning; as in modern French, *était*, 'was', from Latin *stabat*, or nearly as *exist*, literally 'stand forth'.

4. In *metaph.*, to subsist in a state not necessarily amounting to actual existence; have the rudiments of existence. See *being*.—5. An auxiliary verb denoting subsistence in or subjection to the mode of action or being expressed by the principal verb. (a) Joined with a present participle, it has the grammatical construction of a predicate adjective qualifying the subject, to make a continuous or progressive or imperfect present: thus, *I am loving*, etc., beside *I love*, etc.—to match which the language has rather recently acquired a corresponding passive, *I am being loved*, beside *I am loved*. (b) It is joined with a past participle (having the same construction as above), to make phrases equivalent with the passive verb-forms or verb-phrases of other languages: thus, *he is loved*, Latin *amatur*, German *er wird geliebt*.

Hence such phrases are ordinarily viewed as making a passive conjugation of the English verb. They are distinguished in form from mere combinations of *be* with a predicate participle: thus, *he is beaten* is passive when it means 'somebody is beating him,' but not when it means 'he is a beaten man,' or 'somebody has beaten him.' (c) Formerly, as still to a very limited extent (much more in other related languages, as German and French), *be* was the auxiliary used in making the past tenses of intransitive verbs, as *have* of transitives: thus, *he is come*, *they were gone* (German *er ist gekommen*, French *ils étaient allés*), and so on. At present, *have* has come to be the auxiliary almost universally used in this sense.

The heathen are perished out of his land [that is, have perished and now no longer exist in the land]. Ps. x. 16.

(d) An infinitive with *to* after *be* forms a sort of future, often with a certain implication of obligation: thus, *he is to come*, *they were to appear*, *she would have been to blame* or *to be blamed*. (*Be*, with *to*, in perfect tenses (*have been*, *had been*, etc.), is used in the sense of *go*, yet hardly except in colloquial style: thus, *he has been to Paris*; *we had been to see her*.—*Been* and, a common vulgarism introduced pleonastically into the perfect and pluperfect tenses of other verbs: sometimes extended to *been* and *gone* and.

It. *be*, *<* L. *be*, shortened from *beta* (*<* Gr. *βῆτα*: see *beta*), or formed from *b* + *e*, the usual assistant vowel in the names of the letters.] The name of the second letter of the alphabet, usually written simply *b* or *B*. See *B*.

be³, *prep.* Obsolete form of *by*. Chaucer.

Be. In *chem.*, the symbol for *beryllium* (the same as *glucinum*).

be⁻¹. [ME. *be*-, in early ME. commonly *bi*-, *<* AS. *be*-, *bi*-, = OS. *bi*- = OFries. *be*-, *bi*-, = D. *be*-, MLG. *bi*-, *be*-, LG. *be*- = OHG. *bi*-, *be*-, MHG. *G. be*- = Goth. *bi*- (lengthened under stress, as in comp. with a noun, AS. *bi*-, *big*-, D. *bi*-, OHG. MHG. *bi*-, G. *bei*-), an inseparable prefix, orig. the same as the prep., AS. *be*, *bi*, E. *by*, meaning primarily 'about,' being prob. = L. *bi*-Gr. *φῆ*, in L. *ambi*-, Gr. *ἄμφι*, about (see *ambi*-, *amphi*-); see *by*¹ and *be*⁻².] An inseparable prefix of verbs, and of nouns thence derived. It means primarily 'about,' 'around,' as in *beset*, *begird*, whence the more general sense 'around,' 'all over,' leading to a merely intensive use, as in *besmear*, *bespatter*, *besprinkle*, etc. It is also used to form transitive verbs from nouns, as *begem*, *bedeen*, *befog*, *benire*, etc., or from intransitive verbs, as *belite*, *behold*, *besing*, etc., verbs of either class often conveying slight contempt, as *bepraise*, *beplaster*, *bepraise*, etc., and are hence often made for the nonce. In a few verbs, all obsolete except *behead*, *be* assumed a privative force; while in many verbs this prefix, through loss of the simple verb, or a deflection of its sense, or by mere dilution, has now no assignable force, as in *begin*, *bequeath*, *become*, *behold*, etc.

be⁻². [ME. and AS. *be*-, *bi*-, or separately *be*, *bi*, being the prep. with following adv. or noun: see *be*⁻¹.] An inseparable prefix of adverbs, which may also be used as prepositions or conjunctions. It is properly the preposition *bi*, Middle English *be*, *bi*, (a) used adverbially, as in *before*, *behind*, *between*, *betwixt*, *below*, etc., contracted in *above*, *about*; or (b) merged with the governed noun, as in *because*, *beside*, that is, 'by cause,' 'by side': so also in *behalf*, originally a prepositional phrase, now taken as a noun. See the words cited.

(also *gobet* = *OS.* *gibed* = *OHG.* *gabēt*, *MHG.* *G.* *gabēt*, neut.), a prayer, *bidan*, etc., pray; see *bid*. Beads are used by Roman Catholics to keep them right as to the number of their prayers, one bead of the rosary being dropped every time a prayer is said; hence the transference of the name from that which is counted (the prayers) to that which is used to count with. Cf. *Sp.* *cuentas*, *Pg.* *contas*, the beads of a rosary, [*Sp.* *Pg.* *contar*, count.] 1†. Prayer; a prayer; specifically, a prayer of the list or bead-roll, read at public church-services by the preacher before his sermon, or by the curato (see *bead-roll*): usually in the plural. Hence, in this sense, to *bid* (*one's*) *beads*, to say (*one's*) prayers. See phrases below.
 When holy and devout religious men
 Are at their *beads*, 'tis much to draw them thence;
 So sweet is zealous contentmentation.

 2. One of the little balls, of wood, cocoanut-shell, pearl, glass, jewels, or other material, strung in a prescribed order, which form the chaplet or rosary in use in the devotions of the Roman Catholics, Buddhists, etc., to keep count of the number of prayers said. See *pair of beads*, below.
 The commonest, though not the only, appliance for reckoning these prayers was, and still is, a string of *beads* so put together that every set of ten smaller ones for the "Hail Marys" is parted by a larger *bead*, to tell when the "Our Father" must be recited.
Rock, Church of our Fathers, III. i. 320.
 3. Anything resembling a rosary-bead, strung with others for ornament, as in necklaces or beadwork: as, glass, amber, metal, coral, or other *beads*.

 7. A glass globule for trying the strength of alcoholic spirits. Beads are numbered according to their specific gravities, and the strength of the spirit is denominated by the number of that one which remains suspended in it, and neither sinks to the bottom nor floats on the surface. Beads, in determining the strength of spirits, are now for the most part superseded by the hydrometer.
 8. beads. The bead is a very frequent ornament, used to mark a junction or a separation, as between the shaft and the capital of a column, to dress an angle, etc. It is much used in woodwork of all kinds, from carpenter's work to the finest kinds of joinery and cabinet-work. Among joiners the bead is variously introduced; as: (a) *bead and butt* (fig. 1), framed work in which the panel is flush with the framing and has a bead run on two edges in the direction of the grain only, while the ends are left plain; (b) *bead and flush* (fig. 2), framed work in which a bead is run on the edge of the framing; (c) *bead and quirk* (fig. 3), the edge of a piece of stuff on which a bead is stuck, or stuck, as it is called, flush with the surface; (d) *bead and double quirk*, or *return bead* (fig. 4), the angle of a piece of stuff on which a bead is stuck and quirked or relieved on both surfaces; (e) *bead, butt, and square work*, a panel which has beads on two of its edges on one side only, while the other side is plain. II., iii. 3), a rosary; now, specifically, a chaplet of five decades, that is, a third part of the rosary. A chaplet or pair of beads, as thus restricted, is the form in common use under the name of the *beads*. The large beads between the decades were formerly called *gaudies* (see *gaul*, *gandy*); each separate bead, or grain, as it is now termed, Tyndale calls a *stone*.

The phrases to *count* and to *number* (*one's*) *beads* are merely literary.

The plant producing beans. The bean known to the ancients from prehistoric times was the *Vicia Faba* (or *Faba vulgaris*), a native of western Asia, and the same as the field, horse, or tick-bean, and the broad or Windsor bean, still largely cultivated in the fields and gardens of the old world. It is used when green as a table-vegetable, and when dry as feed for horses and sheep. The numerous other kinds of cultivated beans are of American origin, and belong chiefly to the genus *Phaseolus*. To *P. vulgaris* belong the common kidney-bean, and the haricot and French beans, the string-bean, and the pole-bean; to *P. lunatus*, the Lima and Carolina beans, the sugar-bean, and the butter-bean; and to *P. nanus*, the dwarf, field, bush-, navy-, pea-, and six-weeks beans. The asparagus-bean, *Dolichos sesquipedalis*, with very long cylindrical pods, frequently cultivated in Europe, is a native of tropical America. Beans as an article of food are very nutritious, containing much starch and a large percentage of a nitrogenous compound called legumin, analogous to the casein in cheese. of the same word. Perhaps ult. = *L. ferus*, wild, *fera*, a wild beast: see *fierec*.] 1. A large plantigrade carnivorous or omnivorous mammal, of the family *Ursidae*, especially of the genus *Ursus*. The teeth of the true bears are 42, and none of the molars are sectorial. The animals are less truly carnivorous than most of the order to which they belong, feeding largely upon roots, fruits, etc., as well as honey and insects. The tail is rudimentary, and the muzzle is prominent, with mobile lips and a slender, sometimes very extensible, tongue. The best-known species is the brown or black bear of Europe and Asia, *Ursus arctos*, found chiefly in northerly regions, of which several varieties are described, differing much in size and color, and to some extent in shape: it is ordinarily about 4 feet long and 2½ feet high; its flesh is eaten, its pelt is used for robes, and its fat is in great demand as an unguent known as bear's grease. The grizzly bear of North America, *U. horribilis*, is as regards specific classification hardly separable from the last, and like it runs into several varieties, as the cinnamon bear, etc. It is ordinarily larger than the European, and is noted for its ferocity and tenacity of life. It inhabits the mountainous portions of western North America. The common black bear of North America is a smaller and distinct species, *U. americanus*, usually black with a tawny snout, but it also runs into a cinnamon variety. See cut under *Ursus*. The polar bear or white bear, *Ursus* or *Thalassarctos maritimus*, is very distinct,

The Syrian bear, *U. syriacus*, and the Himalayan bear, *U. himalayanus*, respectively inhabit the regions whence they take their names. The spectacled bear, *Ursus* or *Tremarctos ornatus*, is the sole representative of the *Ursidae* in South America; so called from the light-colored rings around the eyes, which have exactly the appearance of a pair of spectacles, the rest of the face and body being black. The Malayan bear or orang, *U. malayanus*, is a small, black, close-haired species, with a white mark on the throat, with protrusible lips and slender tongue, capable of being taught a variety of amusing tricks in confinement. The sloth-bear or assail of India is distinct from the other bears, and is usually placed in a different genus, *Melursus labiatus*. See *Ursidae*, and cut under *assail*.

= *Syn.* *Beautiful*, *Beauteous*, *Handsome*, *Pretty*, *Fair*, *Lovely*, *Comely*, charming, all apply to that which is highly pleasing, especially to the eye. *Beautiful*, the most general of these words, is also often the noblest and most spiritual, expressing that which gives the highest satisfaction to eye, ear, mind, or soul. *Beauteous* is chiefly poetic, and covers the less spiritual part of *beautiful*. *Handsome* is founded upon the notion of proportion, symmetry, as the result of cultivation or work; a *handsome* figure is strictly one that has been developed by attention to physical laws into the right proportions. It is less spiritual than *beautiful*; a *handsome* face is not necessarily a *beautiful* face. *Handsome* applies to larger or more important things than *pretty*: as, a *handsome* house; a *pretty* cottage. It is opposed to *homely*. *Pretty* applies to that which has symmetry and delicacy, a diminutive beauty, without the higher qualities of gracefulness, dignity, feeling, purpose, etc. A thing not small of its kind may be called *pretty* if it is of little dignity or consequence; as, a *pretty* dress or shade of color; but *pretty* is not used of men or their belongings, except in contempt. *Fair* starts from the notion of a brightness that catches the eye; it notes that sort of beauty which delights the eye by complexion and feature; in this sense it is now less common in prose. *Lovely* is a strong word for that which is immediately pleasing to the eye; it applies primarily to that which excites admiration and love. *Comely* applies rather to the human figure, chiefly in its proportions; it is used less commonly than *handsome* to express the result of care or training. See *elegant*.

A rodent quadruped, about two feet in length, of the family *Castorida* and genus *Castor*. *C. fiber*, at one time common in the northern regions of both hemispheres, now found in considerable numbers only in North America, but occurring solitary in central Europe and Asia. It has short ears, a blunt nose, small fore feet, large webbed hind feet, with a flat ovate tail covered with scales on its upper surface. It is valued for its fur (which used to be largely employed in the manufacture of hats, but for which silk is now for the most part substituted) and for an odoriferous secretion named castor or castoreum (which see).

Its food consists of the bark of trees, leaves, roots, and berries. The favorite haunts of the beavers are rivers and lakes which are bordered by forests. When they find a stream not sufficiently deep for their purpose, they throw across it a dam constructed with great ingenuity of wood, stones, and mud, gnawing down small trees for the purpose, and compacting the mud by blows of their powerful tails. In winter they live in houses, which are from 3 to 4 feet high, are built on the water's edge with subaqueous entrances, and afford them protection from wolves and other wild animals. They formerly abounded throughout northern America, but are now found only in unsettled or thinly populated regions. Several slightly different varieties of the European beaver have received special names. The North American beaver is somewhat larger than the European, and exhibits some slight cranial peculiarities;

In geology a *bed* is a layer of rock; a portion of a rock-mass which has so much homogeneity, and is so separated from the rock which lies over and under it, that it has a character of its own. This distinctness of character may be given by peculiarities of composition, texture, or color, or simply by a facility of separation from the associated beds. Thus, there may be a bed of marble intercalated in a mass of shale; or there may be several beds of marble associated together, each bed being individualized by peculiarities of texture or color. In the latter case there would ordinarily be a distinct break or solution of continuity between the different beds, so that when quarried they would separate from each other without difficulty along the plane of contact. The Latin word *stratum* is commonly employed in geological writings, and is almost the exact equivalent of *bed*. *Bed*, as applied to mineral deposits, implies ordinarily that the masses of ore thus characterized lie flat, and have more or less of the character of sedimentary deposits, in distinction from those of true veins, or lodes.

An insect of the genus *Apis*; a hive-bee or honey-bee. See *Apis*¹. The common honey-bee, *A. mellifica*, has from the earliest periods been kept in hives for its wax and honey. It is also found wild in great numbers (now especially in North America, where the bee was introduced by the European colonists), storing honey in hollow trees or in other suitable situations. It lives in swarms or societies of from 10,000 to 50,000 individuals. These swarms contain three classes of bees—the perfect females or queen bees, the males or drones, and the imperfect or undeveloped females, called *neuters*, constituting the working bees. In each hive or swarm there is only one female or queen, whose sole office is to propagate the species. The queen is much larger than the other bees. When she dies, a young working bee three days old is selected, its cell is enlarged by breaking down the partitions, its food is changed to royal jelly or paste, and it grows into a queen. The queen lays 2,000 eggs a day. The drones serve merely for impregnating the queen, after which they are destroyed by the neuters. These last are the laborers of the hive. They collect the honey, form the cells, and feed the other bees and the young. They are furnished with a proboscis by which they suck the honey from flowers, and a mouth by which they swallow it, conveying it then to the hive in their stomachs, whence they discharge it into the cells. The pollen of flowers settles on the hairs with which their body is covered, whence it is collected into pellets by a brush on their second pair of legs, and deposited in a hollow in the third pair. It is called *bee-bread*, and is the food of the larvae or young. The adult bees feed on honey. The wax was at one time supposed to be formed from pollen by a digestive process, but it is now ascertained that it is formed by secretion from the honey. The females and neuters have a barbed sting attached to a bag of poison, which flows into the wound inflicted by the sting. When a hive becomes overstocked a new colony is sent out under the direction of a queen bee. This is called *swarming*. Besides the com-

1. An alcoholic liquor made from any farinaceous grain, but generally from barley, which is first malted and ground, and its fermentable substance extracted by hot water. To this extract or infusion hops or some other vegetable product of an agreeable bitterness is added, and it is thereupon boiled for some time, both to concentrate it and to extract the useful matters from the hops. The liquor is then suffered to ferment in vats, the time allowed for fermentation depending upon the quality and kind of beer, and after it has become clear it is stored away or sent to the market. The beers of England and France, and for the most part those of Germany, become gradually sour by exposure to air. *Ale* and *beer* were formerly synonymous terms, *ale* being the earlier in use; at present, *beer* is the common name for all malt liquors, and *ale* is used specifically for a carefully made beer of a certain strength, and rather light than dark; thus, small beer, ginger beer, and the like, are not ale, nor are stout and porter. A distinction drawn by Andrew Boorde, in 1542, is that ale is made of malt and water, and should contain no other ingredients, while beer is made of malt, hops, and water.

beg (beg), *v.*; pret. and pp. *begged*, ppr. *begging*. [Early mod. E. also *begg*, *begge*. < ME. *beggen*, first found in the early part of the 13th century (in the "Ancren Riwle"); origin un-

certain. Various explanations have been offered: (1) < ME. *bagge*, a bag (because beggars carry bags; see first quotation under *beggar*, *n.*); but this is certainly wrong. It would imply the forms **beggen*, **begge*, as variants of *baggen*, *bagge*, but no such variants are found or are probable, and no such sense as 'put into a bag,' or 'carry a bag,' which might connect the notion of 'bag' with that of 'beg,' belongs to the ME. verb *baggen*, which is found only in the sense of 'swell out like a bag'; the sense of 'put into a bag' is modern, and that of 'carry a bag' does not exist; *bagger*, moreover, the supposed antecedent of *beggar*, is only modern. (2) < AS. *bedecian*, *beg* (connected with Goth. *bidagga*, a beggar, appar. < *bidjan* = AS. *bidan*, E. *bid*, ask; cf. D. *bedelen* = OHG. *betalon*, MHG. *betelen*, G. *beteln*, *beg*, freq. of D. *bitten* = G. *bitten* = AS. *biddan*, E. *bid*, ask); but the AS. *bedecian* occurs but once, in the 9th century, and there are no intermediate forms to connect it with ME. *beggen*. (3) < OFlem. **beggen*, *beg*; but there is no such word. (4) < OF. *beg*-, the common radical of *begard*, *begart*, *beguard*, *begar* (ML. *begardus*, *beggardus*, *beghardus*, etc.), and *beguin* (ML. *begnius*, *begnius*, *beghinus*, *beguinus*, etc.), names given to the members of a mendicant lay brotherhood (see *Beghard* and *Beguine*); also applied to any begging friar or other beggar. Such mendicants were very numerous at the time of the first appearance of the E. verb, and the derived OF. verb *beguiner*, *beguigner* (< *beguin*), with AF. *begger*, is actually found in the sense of 'beg.' The E. verb may be a back formation from the noun *beggar* (ME. *begger*, *beggere*, *beggar*, *beggare*), which is, in this view, an adapted form (as if a noun of agent in *-ar*, *-er*) of the OF. *begar*, *begard*, etc., a *Beghard*. *Beghard* is otherwise not found in ME., though the precise form *begger* is found in Wyclif and later as a designation of the mendicant friars (*Beghards*), appar. without direct reference to their begging.] **I. trans. 1.** To ask for or supplicate in charity; ask as alms.

E. also *begin, begine, beghine, beggin, bigin, biggayne*, *< ME. begyne, bygyne*, *< OF. bequine*, mod. F. *béguine* = Sp. *Fig. beguina* = It. *beghina, bighina* (MD. *beghijne, D. bejjin, LG. and G. begiue*, *< ML. beghina, beghina, beggina, bequina, bigina*, etc. (cf. F. *bègue*, dial. *beique, bieque*, stammering; of unknown origin), a priest of Liège, who founded the sisterhood. See also *Beghard*. The origin of the name was not generally known, and the forms varied, leading to many etymological conjectures. The connection with E. *beggar* and *beg*¹ is perhaps real; in the sense of 'hypoerite' and 'bigot' (as in It. *beghino*), the word was later confused with *bigot*, q. v.] 1. A name given to the members of various religious communities of women who, professing a life of poverty and self-denial, went about in coarse gray clothing (of undyed wool), reading the Scriptures and exhorting the people. They originated in the twelfth or thirteenth century, and formerly flourished in Germany, the Netherlands, France, and Italy; and communities of the name still exist in Belgium. See *beguinage*. [Now generally written *Beguine*.]

2. [Only *Beguine*.] A member of a community of men founded on the same general principle of life as that of the *Beguines* (see 1). They became infected with various heresies, especially with systems of illuminism, which were afterward propagated among the communities of women. They were condemned by Pope John XXI. in the early part of the fourteenth century. The faithful *Beguins* joined themselves in numbers with the different orders of friars. The sect, generally obnoxious and the object of severe measures, had greatly diminished by the following century, but continued to exist till about the middle of the sixteenth. Also called *Beghard*. [These names have been frequently used as common nouns, without capitals.]

beguinage (beg'in-āj, or, as mod. F., bā-gē-nāzhi'), *n.* [*F. béguinage*, OF. *beguinage* (*> ML. beghinagium*), *< béguine*, a *Beguine*. See *Beguine* and *-age*.] A community of *Beguines*. A *beguinage* usually consists of a large walled inclosure, containing a number of small detached houses, each inhabited by one or two *Beguines*; there are also some common houses, especially for the novices and younger members of the community. In the center is the church, where certain religious offices are performed in common. Each *Beguine* keeps possession of her own property, and may support herself from it, or from the work of her hands, or by serving others in their houses. They are free to leave at any time, and take only simple vows of chastity and obedience during residence. Pious women may also, under certain restrictions, rent houses and live inside the inclosure without formally joining the community. Such establishments are now chiefly met with in Belgium; the immense one near Ghent, built by the Duke of Aremberg in 1274, is the finest example, and one of the most recent.

= *Syn. 1.* *Carriage, Behavior, Conduct, Deportment, Demeanor*, hearing, manner, manners, all denote primarily outward manner or conduct, but naturally are freely extended to internal states or activities. *Carriage*, the way of carrying one's self, may be mere physical attitude, or it may be personal manners, as expressing states of mind: we speak of a haughty or noble *carriage*, but not ordinarily of an ignoble, cringing, or base *carriage*. *Behavior* is the most general expression of one's mode of acting; it also refers particularly to comparatively conspicuous actions and conduct. *Conduct* is more applicable to actions viewed as connected into a course of life, especially to actions considered with reference to morality. *Deportment* is especially *behavior* in the line of the proprieties or duties of life: as, Mr. Turveydrop was a model of *deportment*; the scholars' rank depends partly upon their *deportment*. *Demeanor* is most used for manners as expressing character; it is a more delicate word than the others, and is generally used in a good sense. We may speak of lofty or gracious *carriage*; good, bad, wise, foolish, modest, conceited *behavior*; exemplary *conduct*; grand, modest, correct *deportment*; quiet, refined *demeanor*.

Behind, After.** *Behind* relates primarily to position; *after*, to time. When *after* notes position, it is less close or exact than *behind*, and it means position in motion. To say that men stood one after another in a line was once correct (see *Chaucer, Knight's Tale, l. 901, "kneeled . . . each after other"*), but is not so now. They may come one after another, that is, somewhat irregularly and apart; they came one behind another, that is, close together, one covering another. being (bē'ing), *n.* [*< ME. beyng*, *byng*, verbal *n.* of *been*, *be*.] 1. Existence in its most comprehensive sense, as opposed to non-existence; existence, whether real or only in thought.—2. In *metaph.*, subsistence in a state not necessarily amounting to actual existence; rudimentary existence. But the word is used in different senses by different philosophers. Hegel defines it as immediacy, that is, the abstract character of the present. In its most proper acceptation, it is the name given by philosophical reflection to that which is revealed in immediate consciousness independently of the distinction of subject and object. It may also be defined, but with less precision, as the abstract noun corresponding to the concrete class embracing every object. *Being* is also used in philosophy influenced by Aristotle to signify the rudiment or germ of existence, consisting in a nature, or principle of growth, before actual existence. It is also frequently used to mean actual existence, the complete preparation to produce effects on the senses and on other objects. Psychologically, *being* may be defined as the objectification of consciousness, though the distinction of subject from object logically presupposes being.
Wee may well reject a Liturgie which had no *being* that wee can know of, but from the corrupted times.

ly equally developed and provided with hooks, an internal shell terminated behind by a rostrum of variable form, and a well-developed straight phragmacone. The species are numerous in the Secondary geological formations, and especially in the Cretaceous, and their remains are the cigar-like shells familiar to most persons living in regions where the Cretaceous seas once existed. The skeleton consists of a sub-cylindrical fibrous body called the *rostrum* or *guard*, in which is lodged the *phragmacone*. This consists of a series of chambers, separated by septa perforated by apertures for the passage of the *siphuncle* or *infundibulum*. The *pen* of the common squid is the modern representative, though on an inferior scale, of the ancient

belemnite. Some specimens have been found exhibiting other points of their anatomy. Thus we learn that the organs were enclosed in a mantle; that there were 10 arm-like processes, 8 of them hooked at the end, called the *uncinated arms*, and 2 not uncinated, called the *tentacula*; that the animal was furnished with an ink-bag, and that its mouth was armed with mandibles. The origin of the word was not known, or felt, in Rom., and the forms varied; the It. *battifreddo* (after ML. *batifredus*) simulates *battere*, beat, strike (as an alarm-bell or a clock), and the E. form (after ML. *berfredus*) simulates *bell*, whence the restriction in mod. E. to a bell-tower. The same first element also occurs in *bainberg* and *hauberk*; the second, with accent, in *affray*.]

1. A movable wooden tower used in the middle ages in attacking fortified places. It consisted of several stages, was mounted on wheels, and was generally covered with raw hides to protect those under it from fire, boiling oil, etc. The lowest story sometimes sheltered a battering-ram; the stories intermediate between it and the uppermost were filled with bowmen, archers, etc., to gale the defenders; while the uppermost story was furnished with a drawbridge to let down on the wall, over which the storming party rushed to the assault.

2. A stationary tower near a fortified place, in which were stationed sentinels to watch the surrounding country and give notice of the approach of an enemy. It was furnished with a

bell to give the alarm to the garrison, and also to summon the vassals of a feudal lord to his defense. This circumstance helped the belief that the word was connected with *bell*.

But the Heb. *b'liya'al* is a common noun, meaning worthlessness or wickedness; < *b'li*, without, + *ya'al*, use, profit.] The spirit of evil personified; the devil; Satan; in Milton, one of the fallen angels, distinct from Satan.

gilaubeins, fem., *belief*, < *galaubs*, dear, valu-
able: see *believe*.] 1. Confidence reposed in
any person or thing; faith; trust: as, a child's
belief in his parents.

To make the worthy Leonatus mad,
By wounding his *belief* in her renown.
Shak., Cymbeline, v. 5.

2. A conviction of the truth of a given proposi-
tion or an alleged fact, resting upon grounds
insufficient to constitute positive knowledge.
Knowledge is a state of mind which necessarily implies a
corresponding state of things; *belief* is a state of mind
merely, and does not necessarily involve a corresponding
state of things. But *belief* is sometimes used to include
the absolute conviction or certainty which accompanies
knowledge.

Neither do I labor for a greater esteem than may in
some little measure draw a *belief* from you, to do yourself
good, and not to grace me. *Shak.*, As you Like it, v. 2.

Belief admits of all degrees, from the slightest suspicion
to the fullest assurance. *Reid*.

He [James Mill] uses the word *belief* as the most gen-
eral term for every species of conviction or assurance: the
assurance of what is before our eyes, as well as of that
which we only remember or expect; of what we know by
direct perception, as well as of what we accept on the
evidence of testimony or of reasoning. *J. S. Mill*.

By a singular freak of language we use the word *belief*
to designate both the least persistent and the most per-
sistent coherence among our states of consciousness,—
to describe our state of mind with reference both to those
propositions of the truth of which we are least certain,
and to those of the truth of which we are most certain.
J. Fiske, Cosmic Philos., I. 61.

3. Persuasion of the truth of a proposition,
but with the consciousness that the positive
evidence for it is insufficient or wanting; espe-
cially, assurance of the truth of what rests
chiefly or solely upon authority. (a) In this sense,
the word sometimes implies that the proposition is ad-
mitted as only probable. (b) It sometimes implies that
the proposition is admitted as being so reasonable that
it needs no proof. (c) Sometimes used for religious faith.

Knowledge and *belief* differ not only in degree but in
kind. Knowledge is a certainty founded upon insight;
belief is a certainty founded upon feeling. The one is
perspicuous and objective; the other is obscure and sub-
jective. *Sir W. Hamilton*, Lectures on Logic, xxvii.

One in whom persuasion and *belief*
Had ripened into faith, and faith become
A passionate intuition. *Wordsworth*, Excursion, iv.

They [women] persuade rather than convince, and value
belief rather as a source of consolation than as a faithful
expression of the reality of things. *Lecky*, Europ. Morals, II. 381.

4. That which is believed; an object of belief.
Superstitious prophecies are the *belief* of fools. *Bacon*.

We have but to read the accounts of the early *beliefs* of
mankind, or the present *beliefs* of savages and semi-civil-
ized nations, to see how large a field pure fiction occu-
pies. *G. H. Leves*, Probs. of Life and Mind, II. iii. § 7.

In the cathedrals, the popular *beliefs*, hopes, fears, fan-
cies, and aspirations found expression and were perpet-
uated in a language intelligible to all.
C. E. Norton, Travel and Study in Italy, p. 105.

5. The whole body of tenets held by the pro-
fessors of any faith.
In the heat of persecution, to which the Christian *belief*
was subject, upon its first promulgation. *Hooker*.

The *belief* of Christianity is a *belief* in the beauty of holiness;
the creed of Hellas was a *belief* in the beauty of the
world and of mankind. *Keary*, Prim. Belief, iv.

6. A creed; a formula embodying the essential
doctrines of a religion or a church.
Ye ought to see them have their *belief*, to know the com-
mandments of God, to keep their holy days, and not to
lose their time in idleness. *Lattimer*, Sermons, p. 14.

Perhaps connected with *bell²*, *v.*, roar.] 1. A hollow metallic instrument which gives forth a ringing sound, generally of a musical quality, when struck with a clapper, hammer, or other appliance. Its usual shape resembles that of an inverted cup with a flaring rim. If the bell is stationary, it is often made saucer-shaped, and in this case is commonly termed *agong*. Bells of this form are generally used as call-bells or signal-bells. Bells are made for many purposes and in a great variety of forms and sizes. They usually consist of an alloy of copper and tin, called bell-metal (which see). Church-bells are known to have been in use in Italy about A. D. 400, and in France in the sixth century. The earlier bells were often four-sided, made of thin plates of iron riveted together. The manufacture of the largest and finest bells has been developed since the fifteenth century. The largest ever made is the great bell of Moscow, called the Czar Kolokol, cast in 1733, and computed to weigh about 440,000 pounds. It is about 19 feet in diameter and the same in height. It is supposed never to have been hung, and is now used as a chapel, having been raised in 1836 after lying half buried since 1737, when a piece was broken out of its side in a fire. The largest bell in actual use weighs 128 tons, and is also in Moscow. The bell of the Buddhist monastery Chi-on, in Kioto, Japan, was cast in 1633, and weighs 125,000 cattie, or over 74 tons of 2,240 pounds each. Among the great

3. *pl.* A number of small bells in the form of hawks' bells or sleigh-bells, fastened to a handle and constituting a toy for amusing an infant.—4. *pl. Naut.*, the term employed on ship-board, as *o'clock* is on shore, to denote the divisions of daily time, from their being marked by bells, which are struck every half-hour. The day, beginning at midnight, is divided into watches of four hours each, except the watch from 4 to 8 P. M., which is subdivided into two dog-watches. A full watch thus consists of eight half-hours, and its progress is noted by the number of strokes on the bell. For instance, 1 o'clock P. M. is equivalent to two bells in the afternoon watch; 3 o'clock, to six bells; 4 o'clock, to eight bells, etc.—**Angelus bell**, **Gabriel bell**, **Lady bell**, a church-bell rung to remind those within hearing to recite the angelus. See *angelus*.—**Ave bell**, **Ave Maria bell**, or **Ave Mary bell**. Same as *angelus bell*.

Sir T. Browne, Reliquio Medici, i. 3.
Bell, book, and candle, a phrase popularly used in connection with a mode of solemn excommunication formerly practised in the Roman Catholic Church. After the formula had been read and the book closed, the assistants cast the lighted candles they held in their hands to the ground so as to extinguish them, and the bells were rung together without order; the last two ceremonies symbolized the disorder and going out of grace in the souls of the persons excommunicated.—**Blessed or hallowed bell**, in the Rom. Cath. Ch., a bell which has received the solemn blessing of the church, in which the bishop prays that its sound may avail to summon the faithful, to excite their devotion, to drive away storms, and that the powers of the air, hearing it, may tremble and flee before the standard of the holy cross of the Son of God engraved upon it, etc.—**Elevation or Sanctus bell**, in the Rom. Cath. Ch., a bell rung during the celebration of mass to give notification of the more solemn portions; now usually a small hand-bell, but in pre-Reformation English churches a large bell often hung in a bell-gable erected over the nave, immediately above the entrance of the chancel, from which it was rung by one of the acolytes. Oxford Glossary, p. 74.—**In the bell**. (a) In flower. [Scotch.] (b) In seed, or having the seed-capsules formed, as hops.—**Mass bell**. When rung at the consecration it is also called the *Agnus bell*; at the time of the Sanctus, the *Sanctus bell*, etc. Also called *saints' bell*.—**Saints' bell**. Same as *saering bell*. The term is a corrupted form of *Sanctus bell*, but is no longer specifically restricted to the bell rung at the Sanctus. The saints' bell is now a small hand-bell rung within the church, but formerly it was sometimes a small church-bell suspended in a turret outside the church and rung by a rope from within.

gans for producing the current of air by which the pipes and reeds are sounded. It consists essentially of an air-chamber which can be alternately expanded and contracted, and a nozzle by which the current of air can be directed. The edges of those folds which are turned outward are usually stiffened by a wire frame.

When the tube is pulled out to its full extent, its walls are flat; when it is contracted, it requires merely the space taken up by the folds of its material. In use, the back of a camera of this form can be fixed, by a screw or other device, at any distance from the front or lens end, within the limits of the contracted or expanded tube, that the focus of the lens or the particular work in hand may require.

Bema.—Typical plan of Byzantine Church, St. Theodore, Athens.
 A, B, bema; B', E, parabemata (B', E, prothesis; B', E', diaconicon; C, altar; D, apse; E, E, secondary apses; F, F, iconostasis; G, dome and choir; H, nave; I, I, antiparapses; J, J, J, narthex; K, chief entrance; L, south porch; M, holy doors, or dwarf folding doors, with amphithyra.

An architectural screen (*iconostasis*) with a curtain (*amphithyra*) at its doors, or, as was the case especially in early times, a curtain only, separates the bema from the body of the church. On either side of the bema are the parabemata, called respectively the *prothesis* and the *diaconicon*. These regularly communicate with the bema, and in poor churches often have little more than an indication of separation from it. Rubrically they are often counted as part of the bema.

The Jewish type, which, if anywhere, prevails in the Eastern Church, requires a fourfold division: the Holy of Holies answering to the *bema*, the Holy Place to the choir, the Court of the Jews to the nave, and that of the Gentiles to the narthex.
J. M. Neale, *Eastern Church*, l. 177.

In the later Jewish system, the bema appears as two royal cubits, or 1.054 meters.

In *feudal law*, originally, a fee or an estate in lands granted for life only, and held *ex mero beneficio* (on the mere good pleasure) of the donor. Such estates afterward becoming hereditary, the word *feud* was used for grants to individuals, and *benefice* became restricted to church livings.

2. An ecclesiastical living; a church office endowed with a revenue for its proper fulfillment: the revenue itself. The following terms of canon law are frequently found associated with this word, which is of historical importance: A *benefice* involving no other obligation than service in the public offices of the church is *simple*; if the cure of souls is attached to it, *double*; if with a certain rank attached, *dignitary* or *major*; the two former without rank, *minor*. Thus, a *chantry* was a simple *benefice*; a *prebend* gives the right to only a part of the income of a canonry attached to a collegiate or cathedral church; while the *benefice* is perpetual and has a charge, though there are some (called *anual*, from their being in the hands of the one conferring them) revocable. The *benefice* is said to be *regular* if held by one qualified to fulfil the duties of the office; *secular* if held by a layman; and in *commendam* when in the charge of one commended by the proper authorities until one duly qualified to fulfil its duties is appointed. In the last-named case the discharge of the office is provided for at the expense of the holder. (See *abbé*.) A *benefice* is received by *election*, for example, by a chapter, or from a *patron*, who is properly said to *present* to it, or is *conferred* by the proper ecclesiastical superior; these nominations, in the Roman Catholic Church, regularly need *confirmation* from the pope. His action may cause a *benefice* to be *reserved* or *affected* (which see); or the collation is made *alternative*, that is, to the pope and regular patron or superior, according to the months in which the *benefice* falls vacant, by definite system.

2. A *benefaction*; a *beneficent* act or gift. =*Syn.* *Benevolence, Beneficence, Bounty, Liberality, Generosity, Munificence, Charity, Benevolence*, literally well-wishing, is expressive of the disposition to do good; hence it easily came to be applied to charitable gifts. *Benevolence*, literally well-doing, is the outcome and visible expression of *benevolence*. It is a strong though general word for active and abundant helpfulness to those

who are in need. *Benevolence* may exist without the means or opportunity for *beneficence*, but *beneficence* always presupposes *benevolence*. *Bounty* is expressive of kind feeling, but more expressive of abundant giving. *Liberality* is giving which is large in proportion to the means of the giver. *Generosity* adds to the notion of liberality that of largeness or nobleness of spirit in connection with the gift. *Munificence* is giving on a large scale, not restricting itself to necessary things, but giving lavishly; it is the one of these words most likely to be applied to ostentations or self-seeking liberality, but not necessarily so. *Charity*, while having the best original meaning, has come to be a general word; as to gifts, it is what is bestowed upon the poor or needy, but not always with warm or kindly feelings: as, *official charity*.

=*Syn. 5. Bent, Propensity, Bias, Inclination, Tendency, Prowness, Disposition*, all keep more or less of their original figurativeness. *Bent* is the general and natural state of the mind as disposed toward something; a decided and fixed turning of the mind toward a particular object or mode of action. *Propensity* is less deep than *bent*, less a matter of the whole nature, and is often applied to a strong appety toward that which is evil. *Bias* has often the same meaning as *bent*, but tends specially to denote a sort of external and continued action upon the mind: as, "morality influences men's minds and gives a *bias* to all their actions." *Locke. Bias* is often little more than prejudice. *Inclination* is a sort of *bent*; a leaning, more or less decided, in some direction. *Tendency* is a little more than *inclination*, stronger and more permanent. *Prowness* is by derivation a downward tendency, a strong natural inclination toward that which is in some degree evil: as, *prowness* to err, to self-justification, to vice; but it is also used in a good sense. *Disposition* is often a matter of character, with more of choice in it than in the others, but it is used with freedom in lighter senses: as, the *disposition* to work; the *disposition* of a plant to climb.

Berkeleyan (bér'kē-lē-an), *a.* and *n.* **I. a.** Pertaining or relating to George Berkeley, bishop of Cloyne, Ireland (born 1684, died 1753), or to Berkeleyanism.

The *Berkeleyan* idealism is little more than the easy demonstration that this view that the world of reality exists quite independently of being known by any knowing beings in it, from a philosophical standing point, is untenable. *J. C. Shairp*, *Culture and Religion*, p. 185.

II. n. One who holds Bishop Berkeley's system of idealism; one who denies the existence of a material world.

Berkeleyanism (bér'kē-lē-an-izm), *n.* The philosophy of Bishop Berkeley. See *Berkeleyan*. He holds that material things exist only in so far as they are perceived; their *esse* is *percipi*. It is by thinking them, and making us think them, that the Divine Being creates the material universe. But Berkeley gives to souls a substantive existence, so they must be created otherwise. The Berkeleyan idealism is intimately interwoven with an extreme nominalism, which denies the existence of general conceptions. Berkeley's theory of vision, which in a modified form is now generally adopted by scientific men, is that while we see two dimensions of space, the third is recognized by touch (that is, by the muscular sense), until the eyes become educated to associating certain appearances with certain feelings of touch.

The orig. sense of LL. *biblia*, the books, is made prominent in ML. *bibliotheca*, the Bible, lit. a library: see *bibliotheca*.] 1. The Book, or rather the Books (see etym.), by way of eminence; the Scriptures of the Old and New Testaments. The word *bible* is not found in the English version, but the Greek word occurs frequently, being always translated "book" or "books," sometimes indicating the books of the Old Testament. The Bible consists of two parts: the Old Testament, written in Hebrew, containing the Law, the Prophets, and the sacred writings, or Hagiographa; and the New Testament, written in Greek, consisting of the four Gospels, the Book of Acts, the Epistles of Paul and other apostolic writers, and the Apocalypse or Book of Revelation, the only strictly prophetic book which it contains. Roman Catholic writers accept, in addition to these, most of the books contained in the Apocrypha of the King James version, which occur in the Septuagint (see below) and Vulgate, distributed among the other books of the Old Testament. The principal ancient versions of the Bible, or of portions of it, are the *Targums*, a Chaldee or Aramaic paraphrase or interpretation of the more ancient Hebrew Scriptures; the *Samaritan Pentateuch*, a Hebrew version of the first five books of the Old Testament, ancient in its character, and preserved with jealous care among the Samaritans; the *Septuagint*, a Greek version of the Old Testament prepared by Jewish scholars at Alexandria under the Ptolemies, principally in the third century B. C.; the *Vulgate*, a Latin version of both Old Testament and New Testament, prepared by Jerome at the close of the fourth century A. D.; and the *Peshito*, a Syriac version of the Old Testament

and the major part of the New Testament, probably prepared in the second century A. D. Translations were early made into the principal languages of Christendom. The first complete translation into English was that of Wyclif, about 1383; and the first printed English versions were those of Tyndale and Coverdale, 1524-35. Other important versions are the *Lutheran*, in the German, by Martin Luther, 1521-34—the basis of the Swedish, Danish, Icelandic, Dutch, and Finnish versions; the *Authorized* or *King James*, prepared by a special commission of scholars in England under James I., 1604-11; the *Doanay*, a popular name given to a translation into English prepared by Roman Catholic divines—the Old Testament at Douay (1609-10), the New Testament at Reims (1582); and the *Revised*, a recension of the King James Bible prepared by a committee of British and American Protestant divines, the New Testament appearing in 1881, and the Old Testament in 1885. The number of minor versions is indicated by the fact that, since 1804, translations of the Bible or portions of it have been published in upward of 225 languages. Roman Catholics and Protestants differ in the degree of authority which they attach to the Bible. The Roman Catholic Church "receives with piety and reverence all the books of the Old and New Testaments, since one God is the Author of each" (Council of Trent); but "at the same time it maintains that there is an unwritten word of God over and above Scripture" (Cath. Dict.). Protestants generally hold that "the Supreme Judge, by which all controversies of religion are to be determined, and all decrees of councils, opinions of ancient writers, and private spirits are to be examined, and in whose sentence we are to rest, can be no other but the Holy Spirit speaking in Scripture" (Westminster Conf. of Faith).

It was the first complete Bible to appear in Roman type, the first to omit the Apocrypha, and the first to recognize the division into verses. This translation was in common use in England till the version made by order of King James was introduced in 1611. The Geneva Bible has also been called the *Breeches Bible*, because Gen. iii. 7 is translated, "Then the eyes of them both were opened, and they knew that they were naked, and they sewed fig leaves together and made themselves breeches." "Breeches" occurs in previous translations, though the name is given especially to this one.—**Mazarin Bible**, an edition of the Bible printed by Gutenberg at Mentz in 1450-55, being the first book ever printed with movable types. It was so called because the first known copy of it was discovered in the Mazarin library at Paris in 1760.—**Vinegar Bible**, an edition printed at the Clarendon press, Oxford, in 1717, with the heading to Luke xx. as the "Parable of the Vinegar," instead of the "Parable of the Fig-tree."—**Wicked Bible**, an edition printed in 1632 in which the word *not* is omitted from the seventh commandment.

Cf. *shrewd*, earlier *shrewed*, in sense of 'cursed,' 'curst,' similarly formed (but supported by a verb) from the earlier attrib. *shrewc*: see *shrew*. an essential analytical similarity to a pair of circles, which it also somewhat resembles to the eye. For the purpose of tracing it, it may be defined as the envelop of all the circles having their centers on a fixed ellipse or hyper-

bola, and cutting a fixed circle orthogonally. This circle is called the *focal circle*, because its intersections with the fixed conic are foci of the quartic.

curves of the eighth class. For these there are two real focal circles and two imaginary ones. The two real conics of centers are an ellipse and a confocal hyperbola. There are four real foci and four real cyclic points. This genus has two divisions. In the first, the four real foci are *con-cyclic*, and the real curve consists of two ovals, one of which lies without or within the other, according as the four real foci are on a central ellipse or hyperbola. Fig. 1 shows the latter case, and fig. 2, modified so as to make the upper part like the lower, would show the former. Bicircular quartics of this division have the property that three points can be taken so that the distances r_1, r_2, r_3 , of any point of the curve therefrom shall be expressible by an equation $ar_1 + br_2 + cr_3 = 0$.

The second division of the first genus embraces curves whose four real foci lie in two pairs or two focal circles. These real curves consist of single ovals, as in fig. 2. The second genus comprises unicursal curves with one node (besides those at the circular points). They are of the sixth class. There is one real and one imaginary focal circle. The node may be a cusp (shown by slightly modifying fig. 2 in the upper part) or with an in-loop, as in fig. 3; or it may be an acnode without or within the oval. The third genus contains curves with an ordinary cusp. These are of the fourth class. There is but one focal circle and but one focus. The cusp may point out-

As directed in the 54th canon of the Church of England, this is a form in which the preacher calls on the congregation to pray for the church catholic, the sovereign, and different estates of men. A similar form of prayer preceding the sermon has been in use since long before the Reformation. At first it was called *bidding of the beads* (literally, praying of the prayers), after the Reformation *bidding of the common prayers, bidding (of) prayers or prayer* (the last word being object of the first); but after the sixteenth century the word *bidding* came to be popularly regarded as an adjective, or the phrase *bidding prayer* as a quasi-compound, a prayer which bids or directs what is to be prayed for. A collect is now generally substituted for the bidding-prayer (and sometimes called by the same name), but on special occasions, and in cathedrals and at university sermons, the bidding-prayer is always used. Liturgiologists often designate the deacon's Hymns of the primitive and the Greek Church as *bidding-prayers*. See *ecene* and *litany*.

The needle, bar, disk, or other body which the couple to be measured is to turn is suspended at equal distances from and on opposite sides of its center of gravity by two equally long threads from two fixed points on one higher level. Thus, under the influence of gravity alone, the suspended body comes to equilibrium with the two threads in a vertical plane. When it is turned through any angle about a vertical axis through its center, its weight tends to restore it to its original position; and the moment of this force of restitution can be accurately calculated from the lengths of the threads, the distances of their attachments, and the weight of the suspended body. This moment increases with the angle of displacement up to 90°; consequently, if the force to be measured is not too great, it will, when it is applied, bring the suspended body to equilibrium in a new position, the inclination of which from the old position being observed affords the means of calculating the magnitude of the force.

fifteenth century by the English infantry, especially in defending themselves against cavalry, and to the end of the seventeenth century by civic guards or watchmen, etc. They were formerly sometimes called *brown-bills* or *black-bills*, probably because not brightened, but colored like the modern rifle-barrel.

It is a statement of complaint, and contains the fact complained of, the damage sustained, and a petition or process against the defendant for redress. It is used both in equity and in criminal cases. In *Son's law*, every summary application in writing, by way of petition to the Court of Session, is called a *bill*.

4. In *com.*, a written statement of the names, quantities, and prices of articles sold by one person to another, with the date of sale, or a statement of work done, with the amount charged; an account of money claimed for goods supplied or services rendered.

In some cases statutes are called *bills*, but usually they are qualified by some description: as, a *bill of attainder*.

9. A paper written or printed, and intended to give public notice of something, especially by being exhibited in some public place; an advertisement posted; a placard.—10. A bank-note: usually with its amount: as, a five-dollar *bill*. [U. S.]—*Accommodation bill*. See *accommodation*.—*Appropriation bill*. See *appropriation*.—*Approved bill or note*. See *approve*.—*Bank post-bill*, a bill for a sum not less than £10 issued by the Bank of England without charge, payable at seven days' sight and accepted at time of drawing, for convenience in remitting by post. Bills of this kind originated in 1738, when mail-robberies were frequent in England, and are not now in use.—*Bill in equity*, in an equity suit, the pleading in which the plaintiff sets forth the circumstances on which he bases his claim for relief. It corresponds to the *complaint* or *declaration* at common law.—*Bill of adventure*, a writing signed by a merchant, ship-owner, or master to show that goods shipped on board a certain vessel are at the venture of another person, he himself being answerable only for their delivery.—*Bill of credit*. (a) A letter sent by an agent or other person to a merchant requesting him to give credit to the bearer for goods or money. (b) Paper issued by the authority and on the faith of a State to be circulated as money. The Constitution of the United States (Art. I, § 10) provides that no State shall emit bills of credit, or make anything but gold and silver coin a tender in payment of debts.

Mr. Bancroft shows by a careful upturning of the colonial records that *bills of credit* were nothing else than Government legal-tender notes. *The Century*, XXXII, 160.

Bill of debt, an old term including promissory notes and bonds for the payment of money.—*Bill of entry*, a written account of goods entered at the custom-house, whether imported or intended for export.—*Bill of exceptions*. See *exception*.—*Bill of exchange*, an order in writing, addressed by one person to another, to pay on demand or at a fixed or determinable future time a certain sum in money to a specified person or to his order. Every completed bill of exchange should bear on its face the following: (a) three names, namely, those of the drawer, the drawee, and the payee; (b) the sum to be paid; (c) two dates, namely, the date of drawing and a time for payment or the means of determining the time, as where the bill is payable at sight or a certain time after sight, that is, presentment; (d) the place where it is drawn. If the drawer and drawee are the same person, even in legal effect of name, as where a corporation by one officer draws on itself by naming another officer, as such, as the payee, the paper is not a bill of exchange, but a mere draft or promissory note. The drawer and the payee, however, may be the same, as where one draws to his own order and indorses to a third person. If the paper is not payable absolutely, as where it is expressed to be payable only out of a particular fund, it is not a bill of exchange; but a payment absolutely ordered may be directed to be charged to a particular account of the drawer. The words "value received" are usually inserted, but are not essential to validity. The drawee of a bill becomes liable by accepting it, usually done by writing his name across its face, and he is thereafter called the *acceptor*; but a bill is negotiable before acceptance. In a foreign bill of exchange, the drawer and drawee are residents of different countries. In this respect, in the United States, the residents of the different States are foreign to one another.

A *clean bill* imports that the ship sailed at a time when no infectious disorder was supposed to exist; a *suspected* or *touch'd* bill imports that there were rumors of such a disorder, but that it had not appeared; a *foul bill*, or the absence of a clean bill, imports that the place of departure was infected when the vessel left.—*Bill of indictment*. See *indictment*.—*Bill of lading*, a receipt for goods delivered to a carrier for transportation. It is usually of goods shipped on board of a vessel and signed by the master of the vessel, acknowledging the receipt of the goods, and usually promising to deliver them in good condition at the place di-

rected, dangers of the sea, the act of God, perils of war, etc., excepted. In foreign trade they are usually drawn up in triplicates, one of which goes to the shipper, one to the consignee, and one is retained by the master. Often abbreviated *B. It is often given to a creditor in security for money borrowed, or an obligation otherwise incurred. When it expressly empowers the receiver to sell the goods if the money is not repaid with interest at the appointed time, or the obligation not otherwise discharged, the contract is commonly called in the United States a *chattel mortgage*, not a bill of sale.—*Bills of sale acts*, a name given to several English statutes (1578, 1579, 1582, and 1583), regulating bills of sale, especially when given without transferring possession of the property, and requiring a schedule and registration, for the prevention of fraud on creditors.—*Bill of sight*, a form of entry at a custom-house by which goods respecting which the importer has not the full particulars may be provisionally landed for examination.—*Bill of stores*, a license granted at a custom-house to merchant-ships to carry stores and provisions for their voyage duty-free.—*Bill of surfrance*, a coasting license to trade from port to port without paying customs duty, the dutiable goods being loaded and landed at sufferance wharfs.—*Bill payable, bill receivable*, a bill of exchange, promissory note, or other commercial paper. It abrogated that provision of the Missouri compromise of 1820 which forbade slavery north of latitude 36° 30' (the southern boundary of Missouri), left the decision of all questions as to slavery in the Territories or States formed from them to the representatives of the people residing there, extended the fugitive-slave law to these Territories, and allowed appeal in cases affecting the title to slaves from the local courts to the United States Supreme Court. The political consequences of the bill were most important, causing the destruction of the Whig party and the struggle between the proslavery and antislavery parties for the control of the Territories, which culminated in the war of secession and the total abolition of slavery.—*Original bill in equity*, in *law*, a bill of complaint originating a litigation; one not connected with a previous bill, as distinguished from one growing out of a matter before litigated in the court by the same person standing in the same interests.—*Pendleton Bill*, a United States statute of 1883 (22 Stat., 403) regulating and improving the civil service: so called after its promoter, Senator George H. Formerly in the United States the game was played with four balls on a table having six pockets, the players scoring both for caroms and for driving the balls into the pockets. (See *carom*.) This is nearly the present *English game*. Since, however, expert players could continue an inning at the game thus played almost without limit, the pockets were dispensed with and counting was made to depend entirely upon caroms. Later, professional players adopted what is known as the *French game*, in which only three balls are used, and this was modified to the *champions' game*, in which a line, called a *bank-line*, is drawn crossing each corner of the table diagonally, within which two counts only can be made. Experts now play also *cushion-caroms*, in which the cue-ball must touch the cushion before hitting the second object-ball, or hit the second ball again on a return from the cushion; the *bank-line game*, which is the same as the *champions' game*, but with bank-lines 14 inches from the cushion all round the table; and the *bank-game*, in which the cue-ball must hit the cushion before touching any other ball. [The singular form, *billiard*, is occasionally used, and is always employed in composition.

Some tables are provided with six pockets, one at each corner and one in the middle of each of the long sides; others have four pockets; but billiard-tables are now, except in England, commonly made without pockets.

billion (bil'yon), *n.* [*F., contracted from *bimillion, < L. bi-, twice (second power), + F. million, million.*] **1.** In Great Britain, a million of millions; as many millions as there are units in a million (1,000,000,000,000).—**2.** In France and the United States, a thousand millions (1,000,000,000). [The word *billion* was introduced into French in the sixteenth century, in the sense of a million to the second power, as a trillion was a million to the third power. At that time numbers were usually pointed off in periods of six figures. In the seventeenth century the custom prevailed of pointing off numbers in periods of three, and this led to the change in the meaning of the word *billion* in French. The words *billion*, *trillion*, etc., did not apparently come into use in English until a later date, for Locke ("Essay on the Human Understanding," ii. 16, § 6, 1690) speaks of the use of *billion* as a novelty. The English meaning of the word is thus the original and most systematic. The word *billion* is not used in the French of every-day life, one thousand millions being called a *milliard*.]

(see *animula*) of *bimānus*, two-handed: see *bimanous*.] An order of *Mammalia*, including man alone, established by Blumenbach, and retained by Cuvier and most naturalists until quite recently. The order is now practically abolished, since it has been shown that, zoologically and morphologically, man differs less from the anthropoid apes than these apes do from most monkeys. The custom is now to revert in this particular to the classification of Linnaeus, who included man with the apes, monkeys, and lemurs in one order, *Primates*. The zoological rank now usually assigned to the genus *Homo* is that of the type of a family *Hominidae* or *Anthropidae*, the term *Bimana* being used, if at all, as the name of a superfamily or suborder, by means of which man alone is thus contrasted with *Simia*.

The generic word is always written first, and with a capital initial letter; it is, or is taken as, a noun. The specific word follows, and is usually an adjective, or used adjectively, though it may be a noun. In zoology the practice is now to write all specific words with a lower-case (or small) initial, though substantive and personal and geographical words are often written with a capital, which is the common practice in botany. $(x + y)^2 = x^2 + 2xy + y^2$
 $(x + y)^3 = x^3 + 3x^2y + 3xy^2 + y^3$
 $(x + y)^4 = x^4 + 4x^3y + 6x^2y^2 + 4xy^3 + y^4$; or, in general,
 $(x + y)^n = x^n + nx^{n-1}y + \frac{n(n-1)}{2}x^{n-2}y^2 + \frac{n(n-1)(n-2)}{2 \cdot 3}x^{n-3}y^3 + \text{etc.}$

The word *quartic* has now completely superseded *biquadratic*, except in the following phrases.—**Biquadratic equation**, an equation with one unknown quantity the highest power of which contained in the equation is the fourth. Biquadratic equations are always susceptible of algebraic solution; equations of higher degrees are generally capable only of numerical solution.—**Biquadratic function, involution**. See the nouns.—**Biquadratic parabola**, in *geom.*, a curve line of the third order, having two infinite legs tending the same way.—**Biquadratic root** of a number, the square root of the square root of that number. In *math.*, an imaginary quaternion; a quantity expressible in the form $a + bi + cj + dk$, where i, j, k are three mutually perpendicular vectors, and a, b, c, d are real or imaginary numbers. This is the sense in which Sir W. R. Hamilton used the word. He distinguished such a quantity from a real quaternion, because the whole algebraic procedure with imaginary quaternions is different from and more difficult than that with real quaternions, instead of being essentially the same but more easy, as is the case with ordinary imaginary algebra as compared with real algebra.

2. The ratio of two rotors. This meaning was given to the word by W. K. Clifford, who conceived that Hamilton's biquaternions did not deserve a separate name. In this sense a biquaternion is the sum of two quaternions belonging to different systems, so that their product vanishes.

A tree or shrub belonging to the genus *Betula* (which see). The birches have smooth, laminated outer bark and close-grained wood, which in some species is hard and tough, taking a fine polish, and is used in the manufacture of furniture and for many other purposes. The white, gray, or poplar birch, *Betula alba*, the principal European species, is a small tree, but is put to many uses, especially in the old world. The bark is used for tanning and thatching, and yields an oil which is said to be used to give Russia leather its peculiar odor; spruce-oil is also used for this purpose. The leaves, as well as the sap and oil, are used in the treatment of various chronic diseases, and the wood is used for fuel and many other purposes. Several varieties of this species, as the weeping, cut-leaved, and purple birches, are much cultivated for ornament. The canoe- or paper-birch of

North America, *B. papyrifera*, is a large tree with a very tough, durable bark, which is largely used by the Indians in the manufacture of canoes and tents. The timber is valuable. The yellow or gray birch, *B. lutea*, is one of the most important deciduous trees of the northern Atlantic forests, growing to a very large size; its wood is heavy, very strong, and hard. The black, sweet, cherry-, or mahogany-birch, *B. lenta*, has a very spicy, aromatic bark, yielding a volatile oil identical with oil of wintergreen, and its heavy, dark-colored wood is largely used for making furniture and in ship-building. Other prominent species are the red or river-birch, *B. nigra*, of the Southern States, and the black birch, *B. occidentalis*, of the Rocky Mountains and westward. Several shrubby species are widely distributed in mountainous and arctic regions, reaching a higher latitude than any other deciduous tree, as the alpine birch (*B. nana*), the low or dwarf birch (*B. pumila*), and the scrub birch (*B. glandulosa*).

An overseer; once applied to Christ in the New Testament.

For ye were as sheep going astray; but are now returned unto the Shepherd and Bishop of your souls.

1 Pet. ii. 25.

2. In the earliest usage of the Christian church, a spiritual overseer, whether of a local church or of a number of churches; a ruler or director in the church. See *elder* and *presbyter*.

Paul and Timothy . . . to all the saints in Christ Jesus which are at Philippi, with the bishops and deacons. Philip. i. 1.

The English version has hardly dealt fairly in this case with the sacred text, in rendering *ἐπίσκοπος*, verse 23 (Acts xx.), "overseers"; whereas it ought there, as in all other places, to have been "bishops"; that the fact of elders and bishops having been originally and apostolically synonymous might be apparent to the ordinary English reader, which now it is not.

Dean Alford, Greek Test., Acts xx. 17.

Bishops and *Presbyters*, literally overseers and elders, are universally admitted to be terms equivalent to a considerable extent, and often, at least, applied to the same officers. Smith, Student's Eccles. Hist., p. 176.

3. From an early time, an overseer over a number of local churches; particularly, in the Greek, Oriental, Roman Catholic, and Anglican churches, the title of the highest order in the ministry. See *episcopacy*. The origin of the office of bishop in the Christian church is a matter of dispute. The terms *bishop* and *presbyter* appear to be used interchangeably in the New Testament; but those who support the episcopal form of government maintain that while these terms were not yet limited to their later meanings a difference of rank was indicated by them, that the office of the apostles, as overseers over the local churches and their pastors, was episcopal in its nature, and that the term *bishop* is appropriately used to designate those whom they ordained as their successors in an office which was intended to be permanent; while those who reject the episcopal form of government hold that the apostolic office was purely personal, and that the apostles had not and could not have successors. The Roman Catholic Church, the Greek and other Oriental churches, and the Anglican Church claim an unbroken succession of bishops from apostolic times. Moravian bishops also claim an unbroken episcopal succession, but exercise jurisdiction not as diocesan, but jointly. The first Methodist superintendent, the title afterward superseded by *bishop*, was ordained by Wesley in 1784. (See *itinerant bishop*.)

In the Greek, Oriental, and Roman Catholic churches, the different grades of the office, besides *simple* or *ordinary bishop*, are *archbishop*, *metropolitan*, *primate*, *exarch*, and *patriarch*; these were ecclesiastically instituted for convenience of government. (See *pope*.) The Anglican Church also has archbishops and metropolitans. By virtue of concordats, the nomination of Roman Catholic bishops is sometimes made by the temporal power; the former election by the clergy remains in some cathedral chapters, but more commonly names are proposed by the fellow-suffragans and metropolitan, and by the clergy of the diocese to be provided for, to the Pope, who directly appoints and in any case confirms the new bishop. In England bishops are nominated by the sovereign, who, upon request of the dean and chapter for leave to elect a bishop, sends a *congé d'élire*, or license to elect, with a letter missive, nominating the person whom he would have chosen. The election, by the chapter, must be made within twelve days, or the sovereign has a right to appoint whom he pleases. In the Protestant Episcopal Church in the United States the bishops are elected by the clergy and laity. Bishops are said to be *consecrated* rather than *ordained*. *Ethronization* is the solemn installation following the consecration. A bishop changed from one see to another is said to be *translated*; the church containing his cathedra or episcopal throne is called *cathedral*, and the local jurisdiction indicated by this throne, and the city or locality in which this stands, together with the diocese or territory attached to it, his *see*, to which he is said to be *wedded*, and which is *widowed* when deprived of him. This relation is symbolized by the bishop's ring, which in the Western Church is a part of the insignia of his office, together with the miter, staff, and cross. To this office also are applied the term *pontiff* and its derivatives. Twenty-four of the English bishops and the two archbishops are peers of the realm, with seats in the House of Lords, and certain political and judicial or quasi-judicial functions. In the Mormon Church the bishop is an officer of the Aaronic or lesser priesthood, presides over it, ministers in outward ordinances, conducts the temporal business of the church, and acts as judge on transgressors. Often abbreviated *Bp*. See *chorepiscopus* and *vicar apostolic*.

of the principal or cathedral church of his diocese. In the early church, as still in the Greek Church and in some Roman Catholic churches, it stood behind the altar in the apse, and formed the central and highest seat of the syntronus (which see). According to a later arrangement, which continues to be the general rule in Roman Catholic and Anglican cathedrals, it is placed at the extreme east end of the stalls on either (preferably the northern or gospel) side, and is generally separate, but sometimes forms part of the stalls. It is usually of wood, but often of marble or bronze. Also called *cathedra*.—Boy-bishop. See *boy*.—Cardinal bishop. bismuth (biz'muth), *n.* [= F. *bismuth*, \langle G. *bismuth*, now commonly *wismut*, *wismuth*, orig. *wissmuth*; of mod. (17th century) but unknown origin.] Chemical symbol, Bi; atomic weight, 208; specific gravity, 9.6 to 9.8. A metal of a peculiar light-reddish color, highly crystalline, and so brittle that it can be pulverized. Its crystalline form is rhombohedral, closely approximating that of the cube. It occurs native in imperfect crystallizations, filiform shapes, and disseminated particles, in the crystalline rocks; also as a sulphuret, and in combination with tellurium and some other metals, and in various oxidized combinations. The native metal and the carbonate (*bismutite*) are the chief important sources of the bismuth of commerce. Until recently, almost the entire supply of the metal came from Schneeberg in Saxony, where it occurs in combination with ores of cobalt, arsenic, and silver. Nearly all the bismuth of commerce contains at least a trace of silver. Bismuth is a remarkable metal in that its specific gravity is diminished, instead of being increased, by pressure. It is the most diamagnetic of the metals. It fuses at a comparatively low temperature (507°), and is volatilized at a white heat. Alloys of bismuth with tin and lead fuse at a temperature considerably less than that of boiling water. (See *Newton's* and *Rose's metals*, under *metal*.) Alloys of the same metals with the addition of cadmium fuse at still lower temperatures;

one prepared by Lipowitz remains perfectly fluid at 140°. These alloys have been used to some extent for clichés and for stereotyping, but are now of little practical importance. The chief uses of bismuth are as a medicine and as a cosmetic. For these purposes it is prepared in the form of the subnitrate called in the old pharmaceutical language *magisterium bismuthi*. The cosmetic, in preparing which the basic chlorid has also been employed, is known as pearl-powder or blanc d'Espagne. Bismuth has of late years been much experimented with as a possible component of useful alloys, for several of which patents have been issued; but no one of these alloys is known to have come into general use. Bismuth has also been used to a limited extent in the manufacture of highly refractive glass, and of strass (which see). It is used with antimony in the thermo-electric pile or battery. (See *thermo-electricity*.) It has also begun to be used to some extent in the manufacture of porcelain, for the purpose of giving to its surface a peculiar colorless, irised luster, which can also be had of various colors when other metals are used in combination with the bismuth. This metal is one for which the demand is extremely fluctuating, but on the whole increasing; and, as its ores have nowhere been discovered in large quantity, its price has been more variable than that of any other metal, with the possible exception of nickel, running between 55 cents and \$5 a pound. The total consumption of the metal is probably between 25 and 50 tons a year, and it comes chiefly from the Erzgebirge (between Saxony and Bohemia), France, South America, and New South Wales. It was called by the alchemists, while in their uncertain condition of knowledge as to its nature, by various names, as *marcasita argentea*, *plumbum cinereum*, *stannum cinereum*, etc.; also called formerly in French *étain de glace*, corrupted in English into *tin-glasse*.—**Bismuth-blende**, the mineral culytite (which see).—**Bismuth-glance**, an ore of bismuth. *Prismatic bismuth-glance* is a sulphid of bismuth or bismuthinite, and *acicular bismuth-glance* is the same as *needle-ore* or *akinite*.—**Bismuth ocher**, the mineral *bismite*.—**Bismuth silver**. The aurochs, or bonasus, a European wild ox; hence applied to several similar animals, recent and extinct.—2. *Bison* or *Bos americanus*, improperly called the buffalo, an animal which formerly ranged over most of the United States and much of British America in countless numbers, now reduced to probably a few thousands, and apparently soon to become extinct as a wild animal. It formerly extended into some of the Atlantic States, as Virginia; the contraction of the area of its habitat and the reduction of its numbers have gone on steadily with the advance of European occupation; the construction of the Union Pacific railroad cut the great herd in

two, leaving a southern or Texan herd, chiefly in the region of the Staked Plains, and a northern or Yellowstone or Saskatchewan herd, in the region of the upper Missouri and northward. The animal resembles the aurochs (which see), but is considerably smaller; the hump is very high and large; the hind quarters are light; the tail is about

American Bison (*Bison americanus*).

20 inches long, ending in a wisp of hairs of about 6 inches additional; the horns, especially in the male, are short, thick, and much curved; the head is carried very low; the long shaggy hair of the fore parts sometimes sweeps the ground; the color is blackish in fresh pelages, more brown or gray in worn ones and in aged individuals; the calves are reddish. Formerly the hair-covered skins were much used as robes, but only the cows were killed for them, the hides of the bulls being not easily manageable. In summer, after shedding its hair, the animal is nearly naked.

plied to those years which have 366 days, the extra day being inserted in the month of February. See *bissexus*. This occurs every fourth year, taken as each year which the number is divisible by 4 without remainder. Inasmuch, however, as a year of 365 days exceeds the true length of a solar astronomical year by 11 minutes and 14 seconds, amounting to an error of a day in 128 years, it was provided in the Gregorian calendar that the intercalary day should be omitted in all century years except those which are multiples of 400.

[L.: see *bissex*, and cf. *bissextile*.] The extra or intercalary day inserted by the Julian calendar in the month of February every fourth year, in order to make up the six hours by which (it was reckoned) the natural or solar year exceeds the common year of 365 days. This extra day was provided for by reckoning twice the sixth day before the calends (or first) of March (or the sixth day from the calends of March, both days included, reckoning backward from the succeeding month, as was the custom of the Romans), the "sixth" (or first sixth) day proper thus corresponding to February 25th, according to our reckoning, and the extra sixth, or "second sixth," to our February 24th. Since 1662, when the Anglican liturgy was revised, the 29th day of February has been, more conveniently, regarded as the intercalated day in all English-speaking countries. In the ecclesiastical calendars of the countries of continental Europe, however, the 24th day of February is still reckoned as the bissexus or intercalary day.
